This publication is available at <https://www.gov.uk/government/consultations/levelling-up-and-regeneration-bill-reforms-to-national-planning-policy/levelling-up-and-regeneration-bill-reforms-to-national-planning-policy>

Scope of consultation

Topic of this consultation:

This consultation seeks views on our proposed approach to updating to the National Planning Policy Framework. We are also seeking views on our proposed approach to preparing National Development Management Policies, how we might develop policy to support levelling up, and how national planning policy is currently accessed by users.

A fuller review of the Framework will be required in due course, and its content will depend on the implementation of the government's proposals for wider changes to the planning system, including the Levelling-up and Regeneration Bill.

Scope of this consultation:

The Department for Levelling Up, Housing, and Communities is seeking views on how we might develop new and revise current national planning policy to support our wider objectives. Full details on the scope of consultation are found within chapter 2. Chapter 14 contains a table of all questions within this document and signposts their relevant scope. In responding to this consultation, we would appreciate comments on any potential impacts on protected groups under the Public Sector Equality Duty. A consultation question on this is found in chapter 13.

Geographical scope:

These proposals relate to England only.

Basic information

Body/bodies responsible for the consultation:

The Department for Levelling Up, Housing and Communities

Duration:

This consultation will begin on 22 December 2022 and close at 11.45pm on 2 March 2023.

Enquiries:

For any enquiries about the consultation please contact:

PlanningPolicyConsultation@levellingup.gov.uk.

How to respond

Please respond via Citizen Space which is the department's online consultation portal and our preferred route for receiving consultation responses. We strongly encourage that responses are made via Citizen Space, particularly from organisations with access to online facilities such as local authorities, representative bodies and businesses. Consultations receive a high-level of interest across many sectors. Using the online survey greatly assists our analysis of the responses, enabling more efficient and effective consideration of the issues raised.

The online survey can be accessed on [Citizen Space](https://consult.levellingup.gov.uk/planning-policy-and-reform/levelling-up-and-regeneration-bill-reforms-to-nati) (<https://consult.levellingup.gov.uk/planning-policy-and-reform/levelling-up-and-regeneration-bill-reforms-to-nati>).

If you cannot respond via Citizen Space, you may send your response by email to: PlanningPolicyConsultation@levellingup.gov.uk.

Written responses should be sent to:

Planning Policy Consultation Team
Planning Directorate – Planning Policy Division
Department for Levelling Up, Housing and Communities
Floor 3, Fry Building
2 Marsham Street
London
SW1P 4DF

When you reply, it would be very useful if you please confirm whether you are replying as an individual or submitting an official response on behalf of an organisation and include:

- your name
- your position (if applicable)
- the name of organisation (if applicable)

Please make it clear which question or paragraph number each comment relates to, and also ensure that the text of your response is in a format that allows copying of individual sentences or paragraphs (please use paragraph numbers from the draft track change version of the National Planning Policy Framework published alongside this consultation which can be found here and not the existing paragraph numbers in the current Framework), to help us when considering your view on particular issues.

Thank you for taking time to submit responses to this consultation. Your views will help improve and shape our national planning policies.

Chapter 1 - Introduction

1. The government is committed to levelling up across the country, building more homes to increase home ownership, empowering communities to make better places, restoring local pride and regenerating towns and cities. The February 2022 [Levelling Up White Paper \(https://www.gov.uk/government/publications/levelling-up-the-united-kingdom\)](https://www.gov.uk/government/publications/levelling-up-the-united-kingdom) reiterated the government's commitment to making improvements to the planning system to achieve this, by giving communities a stronger say over where homes are built and what they look like. The [Levelling-up and Regeneration Bill \(the Bill\) \(https://bills.parliament.uk/bills/3155\)](https://bills.parliament.uk/bills/3155) which is before Parliament will put the foundations in place for delivering this by creating a genuinely plan-led system with a stronger voice for communities. It will ensure greater provision of community infrastructure by developers, mandate that beautiful new development meets clear design standards that reflect community views, and enhance protections for our precious environmental and heritage assets.

2. The Bill begins to put communities at the heart of the planning system, offering communities beautiful homes and new neighbourhoods that they will welcome and a greater say in what is built and where. But the Bill is not the whole story: if we are to truly remake the planning system, we also need changes to national policy and guidance, regulations and wider support for local authorities, communities and applicants. This document sets out the improvements we propose to make to national planning policy to deliver this wider change.

3. The [National Planning Policy Framework \(the Framework\) \(https://www.gov.uk/government/publications/national-planning-policy-framework--2\)](https://www.gov.uk/government/publications/national-planning-policy-framework--2) was introduced in 2012 to consolidate the government's planning policies for England. It guides local decision makers on our national policy objectives, providing a framework within which locally prepared plans are produced, and clear national policies to be taken into account when dealing with planning applications and some other planning decisions. When a local planning authority brings forward a plan, they have a statutory duty to have regard to these national policies, and the Framework is therefore drafted with the expectation that plans will be consistent with the policies contained within it. The Framework is also a 'material consideration'^{[[footnote 1](#)]} in decision-taking. It is therefore vital that it reflects this government's objectives for remaking the planning system as soon as possible.

4. We have therefore set out in this document specific changes that we propose to immediately make to the Framework (subject to and following consultation). These will allow us to swiftly deliver the government's commitments to building enough of the right homes in the right places with the right infrastructure, ensuring the environment is protected and giving local people a greater say on where and where not to place new, beautiful development. They will also allow us to deliver cheaper, cleaner, more secure power in the places that communities want to see onshore wind. Specifically, this includes changes to:

- make clear how housing figures should be derived and applied so that communities can respond to local circumstances;
- address issues in the operation of the housing delivery and land supply tests;
- tackle problems of slow build out;

- encourage local planning authorities to support the role of community-led groups in delivering affordable housing on exception sites;
- set clearer expectations around planning for older peoples' housing;
- promote more beautiful homes, including through gentle density;
- make sure that food security considerations are factored into planning decisions that affect farm land;
- and enable new methods for demonstrating local support for onshore wind development.

5. The proposed immediate changes are explained in this document. We are also publishing a tracked changes Framework document which this Prospectus should be read alongside. This sets out the detailed proposed policy wording that is indicative of what would be implemented immediately, subject to the results of this consultation. The government will respond to this consultation by spring 2023, publishing the Framework revisions as part of this, so that policy changes can take effect as soon as possible.

6. The government remains committed to delivering 300,000 homes a year by the mid-2020s and many of the immediate changes focus on how we plan to deliver the homes our communities need. We know that the best way to secure more high-quality homes in the right places is through the adoption of local plans. At present, fewer than half of local authorities have up-to-date plans (adopted in the past 5 years). Our proposed reforms create clear incentives for more local authorities to adopt plans. And our analysis shows that having a sound plan in place means housing delivery increases compared to those local authorities with an out-of-date plan, or no plan at all^[footnote 2]. If communities know they can protect valuable green space and natural habitats as well as requiring new developments to be high quality and beautiful, plans are more likely to be both durable and robust.

7. These changes are being proposed now to realise the housing supply benefits as soon as possible. In line with this, the government is clear that plan production should continue to progress and believes the changes will assist with this. In line with this, those authorities with up-to-date local plans will benefit from additional time to prepare new style plans that will be introduced through the Bill, as set out in our proposed timetable for transitioning to new-style plans set out in chapter 9 of this document.

8. Alongside these specific changes, this document calls for views on a wider range of proposals, particularly focused on making sure the planning system capitalises on opportunities to support the natural environment, respond to climate change and deliver on levelling up of economic opportunity, and signals areas that we expect to consider in the context of a wider review of the Framework to follow Royal Assent of the Bill. The government will consult on the detail of these wider changes next year, reflecting responses to this consultation.

7. Finally, this document also sets out the envisaged role for National Development Management Policies (NDMPs). These are intended to save plan-makers from having to repeat nationally important policies in their own plans, so that plans can be quicker to produce and focus on locally relevant policies. National Development

Management Policies should also provide more consistency for small and medium housebuilders, who otherwise must navigate a complex patchwork of similar but different requirements. We are proposing that National Development Management Policies are set out separately from the National Planning Policy Framework, which would be re-focused on principles for plan-making. This document calls for views on how we implement NDMPs and the government will consult on the detail next year ahead of finalising the position.

Chapter 2 - Policy objectives

1. The proposals in this document are designed to support our wider objectives of making the planning system work better for communities, delivering more homes through sustainable development, building pride in place and supporting levelling up more generally. They should be read alongside the [policy paper which accompanied the introduction of the Levelling Up and Regeneration Bill](https://www.gov.uk/government/publications/levelling-up-and-regeneration-further-information/levelling-up-and-regeneration-further-information#wider-improvements-to-planning-procedures) (<https://www.gov.uk/government/publications/levelling-up-and-regeneration-further-information/levelling-up-and-regeneration-further-information#wider-improvements-to-planning-procedures>) published on 11 May.

2. Building beautiful and refusing ugliness: Good design and placemaking that reflects community preferences is a key objective of the planning system. We have taken steps to emphasise this, including changes made to the National Planning Policy Framework in July 2021 following the important recommendations of the Building Better, Building Beautiful Commission, and the publication of the National Model Design Code; changes which are already having positive effects on new development. The Bill will go further and require every local planning authority to produce a design code for its area. These will set simple clear minimum standards on development in that area – such as height, form and density. These codes will have statutory status when making decisions on development, either through forming part of local plans or being prepared as a supplementary plan. They will empower communities, working with local authorities, to have a say on what their area will look like by setting clear standards for new, beautiful development. The wider review of the Framework next year and accompanying consultation on National Development Management Policies will reflect and consolidate these changes.

3. Securing the infrastructure needed to support development: The Bill includes important measures to capture uplifts in land value more effectively through a new Infrastructure Levy, as well as powers to pilot land auctions as an alternative way for authorities to identify land suitable for planning permission. It will also support better planning for infrastructure through new Infrastructure Delivery Strategies. We propose to update the Framework through the wider review next year to support the implementation of these changes. They will ensure that development delivers the infrastructure that communities need and expect, including at least as much affordable housing as at present. Good infrastructure is also critical to support a changing and competitive economy, such as the development requirements brought about by the growth in ecommerce. More

details will be set out in a future consultation on the details of the Infrastructure Levy.

4. More democratic engagement with communities on local plans: The Bill includes measures to require locally prepared plans to be prepared to a swift two-year time frame whilst increasing the amount of community consultation undertaken within that process. It also sets a higher bar to depart from the plan in decision-making so as to give more certainty to communities about where development will and will not be. In next year's wider review of the Framework, we will set out clear principles to be taken into account when preparing plans, where these are not already set out in the legislation, including the importance of effective community engagement in plan-making. In revising national policy, we will also want to restate and reinforce the importance of community engagement in decision-making, especially in light of the opportunities that improved use of digital technology can offer – including putting environmental evidence at the fingertips of communities and developers. In developing National Development Management Policies, we will seek to support faster plan-making without undermining community control.

5. Better environmental outcomes: Planning can make an important contribution to conserving and enhancing the natural environment, and the vitally important task of mitigating and adapting to climate change. We committed in the government's Net Zero Strategy, published in October 2021, to review the National Planning Policy Framework to make sure it contributes to climate change mitigation and adaptation as fully as possible. In advance of next year's wider review, which will consider the issue further, we are exploring how to do more through planning to measure and reduce emissions in the built environment. We also propose to do more to support environmental enhancement, nature recovery and climate change adaptation; to mitigate the effects of pollution; and to embed the important reforms introduced by the Environment Act.

6. Empowering communities to shape their neighbourhoods: The Bill will strengthen opportunities for people to influence planning decisions that affect their immediate area. We will give increased weight to neighbourhood plans to ensure the efforts of local communities to produce them bear fruit, introduce Neighbourhood Priorities Statements as a means for communities to formally input into the preparation of local plans, and allow residents to bring forward the development they want to see on their street through innovative new 'street votes'. The wider review of the Framework next year will support this.

7. All this is needed to deliver more homes in the right places, supported by sustainable and integrated infrastructure for our communities and our economy. We need more homes to meet the needs of communities and allow more people to own their own home. Communities want beautiful new development, in a local plan shaped by the community, supported by appropriate new infrastructure, that enhances the environment, creating new neighbourhoods while respecting existing ones – if that is what communities demand, then a remade planning system that enables that will deliver more of the right homes in the right places year-on-year. The government remains committed to its manifesto

commitment of 300,000 homes a year by the mid-2020s and is clear that every local planning authority having a local plan in place is the best way of achieving this. But planning for housing is not just about numbers; it is about getting the types and quality of homes that communities need in the right places and supported by the right infrastructure – and supporting our wider economic objectives like delivering levelling up, fuelling urban regeneration and redeveloping brownfield land. We will therefore also consider how national policy can be reframed to support smaller developers, self- and custom-build developers and other innovators to enter the market, building a competitive house building market with high standards, strong rules and clear accountability.

Chapter 3 – Providing certainty through local and neighbourhood plans

1. Every local authority should have a simple, clear local plan in place to plan for housing delivery in a sustainable way for years to come. However, only around 40% of local authorities have local plans adopted within the past 5 years and the government is determined to change this. Plans can protect the important landscapes communities cherish, direct homes to the places local people prefer, give confidence to investors and businesses that they can grow, and secure the sorts of homes and neighbourhoods communities want to see, supported by clear design codes.
2. We also need to make sure that once plans are in place, they are effective and deliverable. The Bill will make an important change, by increasing the weight given to adopted plans. Alongside this, here we set out changes that we propose would take effect from spring 2023 to the 5-year housing land supply rules in areas with up-to-date plans and where communities have made neighbourhood plans.
3. It is right that the presumption in favour of sustainable development set out in the National Planning Policy Framework remains an important part of the planning system, to ensure that development comes forward where up-to-date plans are not in place. Equally, where local authorities have up-to-date plans which are delivering as expected, they should not be forced to expend resources defending against speculative applications that run counter to the plans agreed in consultation with communities. Plans should deliver what they promise.

Reforming the 5 year housing land supply (5YHLS)

4. As previously announced, we are proposing to remove the requirement for local authorities with an up-to-date plan, (which in this case means where the housing requirement as set out in strategic policies is less than 5 years old^{[\[footnote 3\]](#)}), to demonstrate continually a deliverable 5-year housing land supply. We propose the change to take effect when we publish the revised National Planning Policy Framework, expected in spring 2023. Our intention is to provide local authorities with another strong incentive to agree a local plan, giving communities more of a say on development and allowing more homes to be built. Alongside this, we intend

to make further changes to simplify the operation of 5-year housing land supply requirements.

Q.1: Do you agree that local planning authorities should not have to continually demonstrate a deliverable 5-year housing land supply (5YHLS) for as long as the housing requirement set out in its strategic policies is less than 5 years old?

5. The Framework currently requires local authorities to include a buffer of 5%, 10% or 20% on top of their 5-year housing land supply in plan-making or when making decisions. These buffers were built into the 5-year housing land supply as contingency. Currently the 5% buffer is expected in all cases as a minimum, the 10% buffer is applied when an Annual Position Statement or recently adopted plan meets specific criteria (as set out in the Framework) and the 20% buffer is applied as a consequence of the Housing Delivery Test, where a local planning authority delivers less than 85% of the homes it is required to. However, the buffers can add a complexity which may not bring equivalent supply rewards. For plan-making, they can prolong debate, making it harder to get plans into place. For decision-making they can open additional routes to unplanned development. Therefore, to simplify the planning system, support a plan-led approach and to make housing land supply calculations more comprehensible to the public, we propose removing these 5-year housing land supply buffers from national planning policy in the future. Of course, it will remain vitally important that when making plans, local planning authorities identify a robust and deliverable 5-year housing land supply from the intended date of adoption of the plan.

Q.2: Do you agree that buffers should not be required as part of 5YHLS calculations (this includes the 20% buffer as applied by the Housing Delivery Test)?

6. We also recognise that current guidance on using any oversupply of housing in 5-year housing land supply calculations leaves room for different interpretations. We have a system that has the potential to penalise those local planning authorities that overdeliver their housing requirements early in the plan period. In particular, where a local planning authority cannot justify using historic oversupply in its 5-year housing land supply calculations, it can result in a shortfall in a 5-year housing land supply later in the plan period. Consequently, the presumption in favour of sustainable development can result in additional development on land which is not allocated for development in the local plan or in line with local policies.

7. We propose bringing our position on oversupply in line with that on undersupply, when calculating a 5-year housing land supply. This will enable a local planning authority to include historic oversupply in its 5-year housing land supply calculations and to demonstrate it is meeting its community's overall housing requirements. This would be implemented by amending the Framework and planning practice guidance.

Q.3: Should an oversupply of homes early in a plan period be taken into consideration when calculating a 5YHLS later on, or is there an alternative approach that is preferable?

Q.4: What should any planning guidance dealing with oversupply and undersupply say?

Boosting the status of Neighbourhood Plans

8. Currently, where the most important policies for determining an application are out-of-date (including situations where a local planning authority cannot demonstrate it has a 5-year housing land supply, or housing delivery has been below 75% over the previous 3 years), the National Planning Policy Framework (under existing paragraph 11d) places an emphasis on granting permission. One exception is where any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against policies in the Framework. However, where a neighbourhood plan is in force, the decision-maker also needs to consider paragraph 14 of the existing Framework. It says that the adverse impact of allowing development that conflicts with the Neighbourhood Plan is likely to outweigh the benefits, but only if that plan meets the following conditions:

- the neighbourhood plan became part of the development plan 2 years or less before the date on which the decision is made;
- the neighbourhood plan contains policies and allocations to meet its identified housing requirement; and
- the local planning authority has at least a 3-year supply of deliverable housing sites (against its 5-year housing supply requirement) and housing delivery was at least 45% of that required over the previous 3 years.

9. Existing National Planning Policy Framework paragraph 14 gives strong protection from speculative development to areas with a neighbourhood plan less than 2 years old that meets its housing requirement. It does, however, mean that areas with older neighbourhood plans, or where the local planning authority has a low housing land supply or poor housing delivery, can be vulnerable to speculative development.

10. We expect that neighbourhood plans will be more protected in future, because this consultation proposes that where a local plan for the area is up-to-date, a 5-year housing land supply will not be required. This would mean that the presumption in favour of sustainable development would not apply as often.

11. Nevertheless, we are also proposing additional protections for neighbourhood plans in circumstances where a local planning authority's policies for the area covered by the neighbourhood plan are out-of-date. First, we are proposing to extend protection to neighbourhood plans that are up to 5 years old instead of the current 2 years. Second, we are proposing removing tests which currently mean

local planning authorities need to demonstrate a minimum housing land supply and have delivered a minimum amount in the Housing Delivery Test for Neighbourhood Plans to benefit from the protection afforded by the Framework.

Q.5: Do you have any views about the potential changes to paragraph 14 of the existing Framework and increasing the protection given to neighbourhood plans?

Chapter 4 – Planning for housing

1. Ensuring that enough land is allocated to provide the right homes in the right places that our communities need, alongside other economic, social and environmental needs, is a central task of planning. This chapter is seeking your views on potential changes to the Framework and planning practice guidance that will support our objective of a planning system that delivers the new homes we need while taking account of important areas, assets or local characteristics that should be protected or respected.

2. Sustainably planning for housing to reflect the importance of planning for housing, as well as the other forms of development that places need, we propose making small additions to paragraphs 1 and 7 of the existing Framework (the Introduction and Chapter 2 on Achieving Sustainable Development). These changes are intended to signal that providing for necessary development that is integrated with local infrastructure is a core purpose of the planning system, while not negating the fundamental importance of respecting the overarching economic, social and environmental objectives which set out in Chapter 2.

Q.6: Do you agree that the opening chapters of the Framework should be revised to be clearer about the importance of planning for the homes and other development our communities need?

Local housing need and the standard method

3. The standard method for assessing local housing need was introduced in 2018 to make sure that plan-making by local authorities is informed by an objective assessment of projected household growth and affordability pressures, while speeding up the process of establishing housing requirement figures through local plans. It remains important that we have a clear starting point for the plan-making process and we are not proposing any changes to the standard method formula itself through this consultation. However, we will review the implications on the standard method of new household projections data based on the 2021 Census, which is due to be published in 2024.

4. Our proposed changes respond to the concerns we have heard from a wide range of stakeholders. We have heard that:

- there can be confusion about how and when it is acceptable to bring forward a plan that does not meet housing needs in full due to recognised constraints such as Green Belt. As a result, some local authorities are not progressing plans, or are struggling to make their case at examination.
- some major urban centres are not meeting, or proposing to meet, their housing need in full, with the prospect of it being ‘exported’ to surrounding areas, contrary to the objective of delivering need in those areas with the best sustainable transport links and infrastructure, and with the greatest brownfield opportunities.
- delivering more homes than expected in the early years of a plan can create a “ratchet effect” as local authorities have to find more land for homes, even if overall they have delivered on expectations, thus disincentivising ambitious plans.
- some authorities are subject to consequences through the Housing Delivery Test due to developer behaviour when they are granting more than enough permissions.
- areas with recently made neighbourhood plans can find that those plans are overridden and open to unplanned development because the local planning authority cannot demonstrate a sufficient supply of housing, or their plans are set aside due to low performance in the Housing Delivery Test.
- there are concerns about the pace at which some sites, which have been granted planning permission, move through to construction and completion of new homes.

5. The combined effect is to inhibit plan-making, fuel opposition to development and ultimately hinder the supply of high-quality homes where they are needed. To address this, we propose making changes to the current National Planning Policy Framework and associated guidance on local housing need and the Housing Delivery Test. These changes are designed to support local authorities to set local housing requirements that respond to demographic and affordability pressures while being realistic given local constraints. Being clearer about how local constraints can be taken into account and taking a more proportionate approach to local plan examination is intended to speed up plan-making. Since we know that areas with up-to-date local plans have higher levels of housing delivery compared to authorities with an out-of-date local plan, or no plan at all, this is an important part of boosting housing supply. Our proposed changes to the operation of the Housing Delivery Test are similarly designed to support a plan-led system, by preventing local authorities who are granting sufficient permissions from being exposed to speculative development, which can undermine community trust in plan-making. We seek views on specific proposals now so that we can make a focused update to the National Planning Policy Framework and guidance, and quickly have an impact on plan-making and on speculative development in those areas granting enough permissions.

6. Our proposed changes for planning for housing are intended to support plan-making and in doing so help deliver more homes. We would be interested in your views on the overall implications these changes may have on plan-making and housing supply.

Q.7: What are your views on the implications these changes may have on plan-making and housing supply?

Introducing new flexibilities to meeting housing needs

7. We propose making the following changes to take effect from spring 2023:

8. Using an alternative method: local authorities will be expected to continue to use local housing need, assessed through the standard method, to inform the preparation of their plans; although the ability to use an alternative approach where there are exceptional circumstances that can be justified will be retained. We will, though, make clearer in the Framework that the outcome of the standard method is an advisory starting-point to inform plan-making – a guide that is not mandatory – and also propose to give more explicit indications in planning guidance of the types of local characteristics which may justify the use of an alternative method, such as islands with a high percentage of elderly residents, or university towns with an above-average proportion of students. We would welcome views on the sort of demographic and geographic factors which could be used to demonstrate these exceptional circumstances in practice.

Q.8: Do you agree that policy and guidance should be clearer on what may constitute an exceptional circumstance for the use of an alternative approach for assessing local housing needs? Are there other issues we should consider alongside those set out above?

9. Taking account of constraints and previous plans: we propose to make 3 changes relating to matters that may need to be considered when assessing whether a plan can meet all of the housing need which has been identified locally:

- First, we intend to make clear that if housing need can be met only by building at densities which would be significantly out-of-character with the existing area (taking into account the principles in local design guides or codes), this may be an adverse impact which could outweigh the benefits of meeting need in full (as set out in paragraph 11(b)(ii) of the existing Framework). This change recognises the importance of being able to plan for growth in a way which recognises places' distinctive characters and delivers attractive environments which have local support; imperatives which are reflected in the Framework's chapter on achieving well-designed places.
- Second, through a change to the Framework's chapter on protecting Green Belt land, we propose to make clear that local planning authorities are not required to review and alter Green Belt boundaries if this would be the only way of meeting need in full (although authorities would still have the ability to review and alter Green Belt boundaries if they wish, if they can demonstrate that exceptional circumstances exist). This change would remove any ambiguity about whether authorities are expected to review the Green Belt, which is something which has

caused confusion and often protracted debate during the preparation of some plans.

- Third, we are aware that in some cases authorities may feel that they are having to plan for more than they need to, having delivered more homes than were planned for during the preceding plan period. We therefore intend to make clear that authorities may also take past 'over-delivery' into account, such that if permissions that have been granted exceed the provision made in the existing plan, that surplus may be deducted from what needs to be provided in the new plan. This is separate to the proposals described earlier which would allow oversupply to be taken into consideration for the purposes of calculating a 5-year housing land supply.

Q.9: Do you agree that national policy should make clear that Green Belt does not need to be reviewed or altered when making plans, that building at densities significantly out-of-character with an existing area may be considered in assessing whether housing need can be met, and that past over-supply may be taken into account?

Q.10: Do you have views on what evidence local planning authorities should be expected to provide when making the case that need could only be met by building at densities significantly out-of-character with the existing area?

11. The purpose of these changes is to provide more certainty that authorities can propose a plan with a housing requirement that is below their local housing need figure, so long as proposals are evidenced, the plan makes appropriate and effective use of land, and where all other reasonable options to meet housing need have been considered. We will also make clearer in policy that authorities who wish to plan for more homes than the standard method (or an alternative approach) provides for may do so, where they judge that is right for their areas, for example to capitalise on economic development opportunities.

12. We also want to make sure that plans are subject to proportionate assessment when they are examined, in particular to avoid local planning authorities and other parties having to produce very large amounts of evidence to show that the approach taken to meeting housing need is a reasonable one. To do so, we propose to simplify and amend the tests of 'soundness' through which plans are examined, so that they are no longer required to be 'justified'. Instead, the examination would assess whether the local planning authority's proposed target meets need so far as possible, takes into account other policies in the Framework, and will be effective and deliverable. Although authorities would still need to produce evidence to inform and explain their plan, and to satisfy requirements for environmental assessment, removing the explicit test that plans are 'justified' is intended to allow a proportionate approach to their examination, in light of these other evidential requirements. We intend to update national policy in spring 2023 to reflect this.

13. For the purposes of the changes to the test of soundness, we propose that these will not apply to plans that have reached pre-submission consultation

stage^{[footnote 4](#)}, plans that reach that stage within 3 months of the introduction of this policy change, or plans that have been submitted for independent examination.

Q.11: Do you agree with removing the explicit requirement for plans to be 'justified', on the basis of delivering a more proportionate approach to examination?

Q.12: Do you agree with our proposal to not apply revised tests of soundness to plans at more advanced stages of preparation? If no, which if any, plans should the revised tests apply to?

14. Delivering the urban uplift: Whilst important constraints need to be recognised when planning for homes, so too do the opportunities to locate more homes in sustainable urban locations where development can help to reduce the need to travel (thereby supporting sustainable patterns of development overall) and contribute to productivity, regeneration and levelling up. The uplift supports our approach to making the best use of brownfield land. The method for calculating local housing need was amended in 2020 to apply an uplift of 35% for the 20 largest towns and cities, in recognition of this potential. The government intends to maintain this uplift and to require that this is, so far as possible, met by the towns and cities concerned rather than exported to surrounding areas, except where there is voluntary cross-boundary agreement to do so (for example through a joint local plan or spatial development strategy). It will be important to capitalise on opportunities to further densify in these already-developed urban areas, using local design codes to do so in ways that take account of the existing environment. We propose a change to the Framework (see associated draft revised Framework published alongside this document for details) to make clear in policy how the uplift should be applied.

15. The Bill will remove the Duty to Co-operate, although it will remain in place until those provisions come into effect. To secure appropriate engagement between authorities where strategic planning considerations cut across boundaries, we propose to introduce an "alignment policy" as part of a future revised Framework. Further consultation on what should constitute the alignment policy will be undertaken. We are, however, aware that the boundaries of some towns and cities mean that there is sometimes minimal distinction between areas that are part of one of the 20 urban uplift authorities and neighbouring authorities. In some cases, there is good co-operation between such authorities, but we would like to hear views on how such adjoining authorities should consider their role in meeting the needs of the "core" town or city.

Q.13: Do you agree that we should make a change to the Framework on the application of the urban uplift?

Q.14: What, if any, additional policy or guidance could the department provide which could help support authorities plan for more homes in urban areas where the uplift applies?

Q.15: How, if at all, should neighbouring authorities consider the urban uplift applying, where part of those neighbouring authorities also functions as part of the wider economic, transport or housing market for the core town/city?

16. The government does not propose changes to the standard method formula or the data inputs to it through this consultation. However, the government has heard representations that the 2014-based household projections data underpinning the standard method should no longer be relied on. The government continues to use these data to provide stability, consistency and certainty to local planning authorities. Once we have considered the implications of new 2021 Census based household projections, planned to be published by the Office for National Statistics in 2024, the government will review the approach to assessing housing need, to make sure the method commands long-term support based on the most relevant data.

Enabling communities with plans already in the system to benefit from changes

17. Authorities can begin planning in line with these changes, should they be implemented following public consultation, in spring 2023. We recognise that any changes to emerging plans which are necessary may result in delays in getting an up-to-date plan in place. So, to reduce the risk of communities being exposed to speculative development, we propose the following time-limited arrangements. For the purposes of decision-making, where emerging local plans have been submitted for examination or where they have been subject to a Regulation 18 or 19 consultation [\[footnote 5\]](#) which included both a policies map and proposed allocations towards meeting housing need, those authorities will benefit from a reduced housing land supply requirement. This will be a requirement to demonstrate a 4-year supply of land for housing, instead of the usual 5. These arrangements would apply for a period of 2 years from the point that these changes to the Framework take effect, since our objective to provide time for review while incentivising plan adoption.

18. We are also proposing a number of transitional arrangements with respect to moving to the new plan-making system, as set out in Chapter 9 of this document.

Q.16: Do you agree with the proposed 4-year rolling land supply requirement for emerging plans, where work is needed to revise the plan to take account of revised national policy on addressing constraints and reflecting any past over-supply? If no, what approach should be taken, if any?

Q.17: Do you consider that the additional guidance on constraints should apply to plans continuing to be prepared under the transitional arrangements set out in the existing Framework paragraph 220?

Taking account of permissions granted in the Housing Delivery Test (HDT)

19. The Housing Delivery Test was introduced in 2018 to measure homes built in local planning authorities across England. Where delivery is below the number of homes planned for, policy consequences are applied to help identify the reasons for under-delivery and to make sure sufficient land is brought forward for development (an action plan for those delivering below 95%, a 20% buffer added to 5-year housing land supply for those delivering below 85%, and the presumption in favour of sustainable development for those delivering below 75%).

20. The government wants to apply the HDT in a way which does not penalise local planning authorities unfairly when slow housing delivery results from developer behaviour. With this in mind, we are proposing adding to the current Housing Delivery Test an additional permissions-based test. This will 'switch off' the application of 'the presumption' as a consequence of under-delivery, where a local planning authority can demonstrate that there are 'sufficient' deliverable permissions to meet the housing requirement set out in its local plan. This is in addition to the proposal to delete the 20% HDT buffer consequence in the above section on the 5-year housing land supply.

21. To qualify for the Housing Delivery Test presumption 'switch off', a local planning authority would need to have sufficient permissions for enough deliverable homes to meet their own annual housing requirement or, where lacking an up-to-date plan (adopted in the past 5 years), local housing need, plus an additional contingency based on the number of planning permissions that are not likely to be progressed or are revised.

22. The figures currently collected by the department are the numbers of decisions on planning applications submitted to local planning authorities, rather than the number of homes included in each application, so we will need a robust approach for counting permissioned homes. Our assessment is that some contingency will be required: based on an analysis of the number of planning permissions that are not progressed or are revised, this should be set at 15%. We therefore propose defining 'sufficient' deliverable units as 115% of the housing requirement or local housing need, and this will form the basis for the 'switch off'. If a local planning authority can show they have permissioned enough housing, the application of the presumption will be 'switched off.' However, the authority will still be required to prepare an action plan that assesses the causes of housing under-delivery and identifies actions to increase housing delivery in future years.

Q.18: Do you support adding an additional permissions-based test that will 'switch off' the application of the presumption in favour of sustainable development where an authority can demonstrate sufficient permissions to meet its housing requirement?

Q.19: Do you consider that the 115% 'switch-off' figure (required to turn off the presumption in favour of sustainable development Housing Delivery Test consequence) is appropriate?

Q.20: Do you have views on a robust method for counting deliverable homes permitted for these purposes?

23. It remains our intention to publish the 2022 Housing Delivery Test results. However, given our proposed changes and consultation on the workings of the Housing Delivery Test, we would like to receive views on whether the test's consequences should follow from the publication of the 2022 Test or if they should be amended, suspended until the publication of the 2023 Housing Delivery Test, or frozen to reflect the 2021 Housing Delivery Test results while work continues on our proposals to improve it. We will take a decision on the approach to the Housing Delivery Test and the implementation of any the proposed changes in due course, once we have analysed consultation responses.

Q. 21: What are your views on the right approach to applying Housing Delivery Test consequences pending the 2022 results?

Chapter 5 – A planning system for communities

1. The government is committed to creating a planning system that focuses not simply on housing numbers, but on delivering the types of homes that communities want and need. That means a diverse range of homes, more genuinely affordable housing and specific provision for older people – all built to designs that suit local communities and at densities that make efficient use of land while aligning with local character. Below we consult on some specific changes to take effect from spring 2023 and seek views on a set of wider proposals.

More homes for social rent

2. The Levelling Up White Paper made clear our commitment to “increase the amount of social housing available over time to provide the most affordable housing to those who need it” and to “ensure home ownership is within the reach of many more people”. If we want to have functioning communities, with the right homes in the right places, then we need to deliver more homes that are genuinely affordable to rent and to own.

3. The Framework currently includes specific stipulations about securing homes for affordable home ownership, outlining an expectation that 10% of homes in major developments should be available for affordable home ownership. We believe our national planning policy must continue to support this but equally that it should place much greater value on the most affordable housing tenure: Social Rent. [\[footnote 6\]](#)

4. We therefore intend to make changes to the Framework to make clear that local planning authorities should give greater importance in planning for Social Rent homes, when addressing their overall housing requirements in their development

plan and making planning decisions. Securing Social Rent homes will already be the priority for many local planning authorities, and we want national planning policy to support this. We would welcome views on how we could make specific provisions in the revised framework to deliver this, alongside the existing provisions for affordable home ownership.

Q.22: Do you agree that the government should revise national planning policy to attach more weight to Social Rent in planning policies and decisions? If yes, do you have any specific suggestions on the best mechanisms for doing this?

More older people's housing

5. This government is committed to further improving the diversity of housing options available to older people and boosting the supply of specialist elderly accommodation. The National Planning Policy Framework supports this ambition by asking local authorities to provide for a diverse range of housing needs, including for older people.

6. The Framework already makes clear that the size, type and tenure of housing needed for different groups in the community, including older people, should be assessed and reflected in planning policies. In 2019, we also published [guidance to help local authorities implement the policies \(https://www.gov.uk/guidance/housing-for-older-and-disabled-people\)](https://www.gov.uk/guidance/housing-for-older-and-disabled-people) that can deliver on this expectation.

7. The population of the UK is ageing rapidly and around 1-in-4 will be aged 65 or over by 2041. We need to ensure that our housing market is prepared for this challenge and that older people are offered a better choice of accommodation to suit their changing needs, to help them to live independently and feel more connected to their communities. In 2021, a report by the International Longevity Centre indicates that there will be a shortfall of 37% in specialist retirement housing by 2040.

8. We have therefore been considering ways in which the Framework can further support the supply of older people's housing. We propose to do this by adding an additional specific expectation that within ensuring that the needs of older people are met, particular regard is given to retirement housing, housing-with-care and care homes, which are important typologies of housing that can help support our ageing population.

9. Alongside this, we are also launching a taskforce on older people's housing, which we announced in the Levelling Up White Paper. This taskforce will explore how we can improve the choice of and access to housing options for older people and will follow important work conducted recently by Professor Mayhew on meeting the challenges of our ageing population.

Q.23: Do you agree that we should amend existing paragraph 62 of the Framework to support the supply of specialist older people's housing?

More small sites for small builders

10. Small sites play an important role in delivering gentle density in urban areas, creating much needed affordable housing, and supporting small and medium size (SME) builders. Paragraph 69 of the existing National Planning Policy Framework sets out that local planning authorities should identify land to accommodate at least 10% of their housing requirement on sites no larger than one hectare; unless it can be shown, through the preparation of relevant plan policies, that there are strong reasons why this 10% target cannot be achieved. The Framework also asks local planning authorities to use tools such as area-wide design assessments and Local Development Orders to help bring small and medium sized sites forward; and to support the development of windfall sites through their policies and decisions. Local planning authorities are asked to work with developers to encourage the sub-division of large sites where this could help to speed up the delivery of homes.

11. We have heard views that these existing policies are not effective enough in supporting the government's housing objectives, and that they should be strengthened to support development on small sites, especially those that will deliver high levels of affordable housing. The government is therefore inviting comments on whether paragraph 69 of the existing Framework could be strengthened to encourage greater use of small sites, particularly in urban areas, to speed up the delivery of housing (including affordable housing), give greater confidence and certainty to SME builders and diversify the house building market. We are seeking initial views, ahead of consultation as part of a fuller review of national planning policy next year. Alongside this, the government has developed a package of existing support available for SME builders, including the Levelling Up Home Building Fund which provides development finance and Homes England's Dynamic Purchasing System which disposes of parcels of land.

Q.24 Do you have views on the effectiveness of the existing small sites policy in the National Planning Policy Framework (set out in paragraph 69 of the existing Framework)?

Q.25 How, if at all, do you think the policy could be strengthened to encourage greater use of small sites, especially those that will deliver high levels of affordable housing?

More community-led developments

12. To support levelling up and housing market diversification and delivery, we want to encourage a greater role for community-led housing groups. We propose to strengthen statements within Chapter 5 of the Framework to make sure there is more emphasis on the role that community-led development can have in supporting the provision of more locally-led affordable homes.

13. We want to encourage local planning authorities to support the role of community-led groups in delivering affordable housing - including on exception sites - by referencing community-led developments specifically. We are also

proposing to define community-led developments in the Glossary of the framework to assist in the implementation of this policy change.

14. We want national planning policy to recognise the important contribution that community-led groups can make to the development of new affordable homes, and the associated benefits in terms of design quality, and sustaining local communities and local economies. Some community-led developers have told us that the definition of “affordable housing for rent” in the Framework glossary makes this more difficult because it defines this type of housing as having a landlord that is a Registered Provider of social housing (other than where part of Build to Rent schemes).

15. Restricting the definition to homes let by Registered Providers ensures that the residents who will eventually live in those homes benefit from the protections offered by the regulatory system for social housing. We are currently in the process of enhancing those protections through the Social Housing Regulation Bill.

16. Whilst community-led developers may apply to become Registered Providers, many prefer not to do so on grounds of proportionality. Almshouses – who also make a valuable contribution to the provision of affordable housing – have raised similar concerns about the definition.

17. We would therefore welcome views on whether the definition of “affordable housing for rent” should be amended to make it easier for organisations that are not Registered Providers – in particular, community-led developers and almshouses – to develop new affordable homes. We would also welcome views on how we can ensure that any change aligns with our drive (including through the Social Housing Regulation Bill) to ensure that social housing is of good quality and that residents can have access to swift and fair redress. In addition, we would like to make it easier for community groups to bring forward exception sites for affordable housing in rural areas, as they are often particularly well placed to understand community needs and aspirations. We are not aware of any major barriers for community groups in making use of the existing rural exception sites policy but would be keen to seek the views of stakeholders as to whether this is in fact the case, and if there are any broader changes that government could make to encourage community involvement in affordable housing delivery, particularly in rural areas.

Q.26: Should the definition of “affordable housing for rent” in the Framework glossary be amended to make it easier for organisations that are not Registered Providers – in particular, community-led developers and almshouses – to develop new affordable homes?

Q.27: Are there any changes that could be made to exception site policy that would make it easier for community groups to bring forward affordable housing?

Q.28: Is there anything else that you think would help community groups in delivering affordable housing on exception sites?

Q.29: Is there anything else national planning policy could do to support community-led developments?

18. Separately from these immediate changes to the NPPF, we want to take the opportunity to consult on potential ways to improve developer accountability and, in particular, take account of past irresponsible behaviour in decision-making.

19. Public confidence in the planning system is undermined if planning rules are deliberately ignored and there is no sanction against such behaviour. Although the vast majority of developers and landowners follow the rules, instances of irresponsible individuals and companies persistently breaching planning controls or failing to deliver their legal commitments to the community are not uncommon. It is particularly frustrating when local communities see these individuals and companies securing planning permission again despite their blatant disregard for the rules.

20. The Bill already includes a package of planning enforcement reforms to enable local planning authorities to take more effective enforcement action against unauthorised development, but the government wants to go further. We are keen to explore whether past irresponsible planning behaviour should be taken into account when applying for planning permission. This would ensure bad developers cannot continue to play the planning system, helping to strengthen local communities' trust in it.

21. We recognise that it is a long-standing principle that planning decisions should be based on the planning merits of the proposed development – and not the applicant. This principle is critical to ensuring the planning system is fair, open and focused on land use considerations. Nonetheless, there are instances where personal circumstances can be taken into account, and we consider it would be legitimate to consider widening this scope to include an applicant's past irresponsible behaviour.

22. We consider there are at least two potential ways of take account of this past irresponsible behaviour:

- option 1: making such behaviour a material consideration when local planning authorities determine planning applications so that any previous irresponsible behaviour can be taken into account alongside other planning considerations;
- option 2: allowing local planning authorities to decline to determine applications submitted by applicants who have a demonstrated track record of past irresponsible behaviour prior to the application being considered on its planning merits - similar to the amendment which we have already made to the Levelling Up and Regeneration Bill allowing local planning authorities to decline to determine new applications on sites where the build out of development has been too slow.

These options will require primary legislation, as well as further engagement with local planning authorities, the development sector and other stakeholders to ensure that the proposals are fair, proportionate and workable.

Q.30: Do you agree in principle that an applicant's past behaviour should be taken into account into decision making? If yes, what past behaviour should be in scope?

Q.31: Of the 2 options above, what would be the most effective mechanism? Are there any alternative mechanisms?

More build out

23. The government is absolutely clear that developments should be built out as soon as possible once planning permission is granted. However, we recognise that there are concerns about the pace at which some sites, which have received the grant of planning permission, are progressing. We have therefore developed a package of measures to incentivise the prompt build-out of permitted housing sites and to support local authorities to act against those who fail to meet these commitments.

24. Through proposals in the Bill, housebuilders will be required to formally notify local authorities, via a Development Commencement Notice (DCN), when they commence development. We will also modernise and streamline existing powers for local authorities to serve a completion notice (which has the effect that if the development is not completed within the period specified in the notice, the planning permission for unfinished development lapses), making the process much quicker and simpler. Furthermore, housing developers will be required to report annually to local authorities on their actual delivery of housing against a proposed trajectory that they submit on commencing a scheme for which they have permission. Finally, local planning authorities will have discretion to decide whether to entertain future planning applications made by developers who fail to build out earlier permissions granted on the same land. Of course, alongside this we expect local authorities to do their bit in promptly processing planning permissions and discharging conditions and an increase in planning fees that we intend to consult on is intended to help resource local authorities to do this.

25. To further strengthen this package, following passage of the Bill, we intend to introduce 3 further measures, via changes to national planning policy:

- a) We will publish data on developers of sites over a certain size in cases where they fail to build out according to their commitments.
- b) Developers will be required to explain how they propose to increase the diversity of housing tenures to maximise a development scheme's absorption rate (which is the rate at which homes are sold or occupied).
- c) The National Planning Policy Framework will highlight that delivery can be a material consideration in planning applications. This could mean that applications with trajectories that propose a slow delivery rate may be refused in certain circumstances.

26. These measures will improve transparency and public accountability over build out rates once permission is granted, empower local authorities to take account of build out considerations when making planning decisions, and give authorities stronger tools to address build out problems where they arise. We are seeking initial views, ahead of consultation as part of a fuller review of national planning policy next year.

27. We will be launching a separate consultation on proposals to introduce a financial penalty against developers who are building out too slowly.

Q.32 Do you agree that the 3 build out policy measures that we propose to introduce through policy will help incentivise developers to build out more quickly? Do you have any comments on the design of these policy measures?

Chapter 6 – Asking for beauty

Ask for beauty

1. As the Building Better, Building Beautiful Commission made clear, beauty is not a cost to be negotiated away once planning permission has been obtained. It is the benchmark that all new developments should meet. It includes everything that promotes a healthy and happy life, everything that makes a collection of buildings into a place, everything that turns anywhere into somewhere, and nowhere into home.
2. Through our work on levelling up we make clear the importance of well-designed beautiful places to boosting civic pride, with people having a say on how and where beautiful sustainable homes and neighbourhoods are built. As set out in Chapter 2, better design supports housing supply because we know that communities are more welcoming of new development that is beautiful.
3. Design codes prepared by local authorities with communities will ensure beautiful and well-designed development by helping to shape buildings, public spaces, streets and neighbourhoods. These will set simple clear minimum standards on development in that area – such as height, form and density. We intend to consult on introducing secondary legislation so that existing permitted development rights with design or external appearance prior approvals will take into account design codes where they are in place locally.
4. The National Planning Policy Framework was updated in July 2021 to strengthen the emphasis on beauty, place-making and good design. We have updated the reference in existing paragraph 135 on the use of design assessment tools and processes by local planning authorities. This reflects that the [National Model Design Code \(NMDC\)](https://www.gov.uk/government/publications/national-model-design-code) (<https://www.gov.uk/government/publications/national-model-design-code>) is now in widespread use and that the primary means of assessing and improving the design of development should be through the preparation of local design codes in line with the NMDC, which will provide a

framework for creating healthy, safe, green, environmentally responsive, sustainable and distinctive places, with a consistent and high-quality standard of design.

5. We propose to make the changes to the Framework to emphasise the role of beauty and placemaking in strategic policies to further encourage beautiful development and deliver on the levelling up missions through our national planning policy. We also propose to make a stronger link between good design and beauty by making additions to Chapters 6, 8 and 12 of the Framework to further reflect the importance of beautiful development in our everyday lives as recognised by the Building Better, Building Beautiful Commission report so it becomes a natural result of working within the planning system.

Q.33: Do you agree with making changes to emphasise the role of beauty and placemaking in strategic policies and to further encourage well-designed and beautiful development?

6. We also propose to replace the references to 'well-designed' in the title of Chapter 12 and existing paragraphs 84a and 124c to read 'well-designed and beautiful'.

Q.34: Do you agree to the proposed changes to the title of Chapter 12, existing paragraphs 84a and 124c to include the word 'beautiful' when referring to 'well-designed places' to further encourage well-designed and beautiful development?

Refuse ugliness

7. It is important that local planning authorities have visual clarity on the design of development as part of the planning application process by ensuring conditions refer to clear and accurate plans and drawings. This will help support effective enforcement and ensure well-designed and beautiful places where the design quality of approved development is not materially diminished after a scheme is permitted. We propose to amend the Framework to encourage local planning authorities to consider how they can ensure that planning conditions associated with applications reference clear and accurate plans and drawings which provide visual clarity about the design of development, as well as clear conditions about the use of materials where appropriate, so they can be referred to as part of the enforcement process.

Q.35: Do you agree greater visual clarity on design requirements set out in planning conditions should be encouraged to support effective enforcement action?

Embracing gentle density

8. Building upwards in managed ways can help deliver new homes and extend existing ones in forms that are consistent with the existing street design, contributing to gentle increases in density. The Framework sets out how local planning policies and decisions should consider airspace development above existing residential and commercial premises for new homes. This includes allowing upwards extensions where the development would be consistent with criteria relating to neighbouring properties and the overall street scene, as well as being well-designed and maintaining safe access and egress for occupiers.

9. In some locations, local planning authorities have been reluctant to approve mansard roof development, as it has been considered harmful to the character of neighbourhoods^[footnote 7]. As a general approach, this is wrong - all local planning authorities should take a positive approach towards well designed upward extension schemes, particularly mansard roofs. It is proposed that a reference to mansard roofs as an appropriate form of upward extension would recognise their value in securing gentle densification where appropriate.

Q.36 Do you agree that a specific reference to mansard roofs in relation to upward extensions in Chapter 11, paragraph 122e of the existing Framework is helpful in encouraging LPAs to consider these as a means of increasing densification/creation of new homes? If no, how else might we achieve this objective?

Chapter 7 – Protecting the environment and tackling climate change

1. Leaving the environment in a better state and tackling climate change are two of the greatest long-term challenges facing the world today. The government is committed to ensuring that the town and country planning and Nationally Significant Infrastructure Project regimes contribute to addressing both of these challenges. The planning system should, as a whole, reflect the government's ambition to help business and communities protect and enhance the environment for future generations, build a net zero carbon future, and adapt to the impacts of climate change. National planning policies and guidance, spatial development strategies and local plans should all contribute to this core objective of planning.

2. The National Planning Policy Framework already places environmental objectives at the heart of the planning system, making clear that planning should protect and enhance our natural environment, mitigate and adapt to climate change, support the transition to a low carbon future and take full account of flood risk and coastal change. The Environment Act has further strengthened the role of the planning system, through mandatory Biodiversity Net Gain and Local Nature Recovery Strategies, setting the foundations for planning to have a more proactive role in promoting nature's recovery. Government is setting targets under the

Environment Act, which will also drive action across government including through the proposed changes to the planning system to deliver environmental improvement. The changes we have committed to are designed to support more holistic placemaking – through application of the National Design Guide, National Model Design Code and local design codes – will also contribute to these objectives.

3. The government wants to build on these existing protections to make sure that protecting and improving the environment and tackling climate change are central considerations in planning. In principle, planning policies and decisions can support this in 6 main ways:

- protecting important natural, landscape and heritage assets, whilst also incorporating nature, landscape and public space into development and its surroundings;
- supporting habitat creation and nature recovery in ways which benefit nature and people. For instance, nature based solutions can store carbon, assist adaptation (e.g. by reducing water run-off rates) and protect and enhance ecology;
- promoting locational and design decisions that reduce exposure to pollution and hazards and respond to changing climate conditions, for example the risk of overheating, surface-water flooding, and water scarcity;
- enabling renewable and low carbon energy production and distribution, at both a commercial and household scale; and policies for regulating carbon-generating extraction and energy generation;
- promoting development locations, and designs and layouts, that contribute to healthier lifestyles, energy and resource efficiency consumption, for example by reducing the need to travel, increasing public transport connectivity and accessibility and promoting active travel i.e. walking, wheeling and cycling; and
- bringing together the spatial strategy for a place in a way which addresses these in a holistic way and reflects its unique characteristics, whilst also providing a clear framework for development and regeneration.

4. We recognise that some local authorities have already made significant progress in the areas above. We want to ensure these frontrunners continue to innovate and lead the way. And we want to support wider adoption of their best practice. We will review the strategic objectives set out in planning policy to ensure that they support this, along with government's commitments on environmental targets under the Environment Act, net zero and the National Adaptation Programme. Ahead of the wider review of national planning policy next year, we are seeking views on the approach to carbon assessments and the role planning can play in supporting climate adaptation. In the short-term, we are consulting on specific changes to make sure that the food production value of land is reflected in planning decisions that we propose will take effect from spring 2023.

Delivering biodiversity net gain and local nature recovery

5. Whilst conserving and enhancing the environment has always been a central objective of the planning system, the growing scale of the environmental

challenges which we face make the role of planning more important than ever. In particular, we believe the planning system can play a do more to enable nature and environmental improvements. The world-leading Environment Act 2021 provides the foundations for this, giving planning a crucial role in delivering its ambitious environmental programme, designed to halt the decline of species by 2030, clean up our air and protect the health of our rivers, reform the way in which we deal with waste and tackle deforestation overseas. In particular:

- it introduced a requirement to demonstrate at least 10% biodiversity net gain on all development sites, other than a small number of exemptions. This will become mandatory from November 2023 and will be a core component of our commitment to ensuring planning enables better outcomes for nature.
- it introduced new Local Nature Recovery Strategies, which will map important habitats and areas for nature recovery and enhancement. It is important that we reflect these strategies in the plan-making process if we are to capitalise on opportunities to strategically site off-site biodiversity net gain, public access to nature, nutrient mitigation and carbon sequestration; and
- during passage of the Act, the government made a commitment to review the National Planning Policy Framework policy on ancient woodlands and ancient and veteran trees, to consult on the wording in the Framework, and to introduce a new duty on planning authorities to consult the Secretary of State for DLUHC before granting permission for development affecting ancient woodland.

6. Making sure that Biodiversity Net Gain delivers: We have heard concerns about the risk of gaming the system by developers or landowners, clearing sites before applying for planning permission in order to lower the baseline from which gain is assessed. We will work with Defra to review the current degradation provisions for Biodiversity Net Gain, to reduce the risk of habitat clearances prior to the submission of planning applications, and before the creation of off-site biodiversity enhancements.

7. Embracing wider opportunities to support biodiversity: We are also seeking views on how we can strengthen policy and associated national design guidance to promote small-scale changes that can enhance biodiversity and support wildlife recovery. The National Model Design Code already promotes design that will encourage more wildlife-friendly neighbourhoods, including bat and bird boxes, bee and swift bricks and hedgehog highways. In addition, the government has already set out its view that artificial grass has no value for wildlife. Its installation can have negative impacts on both biodiversity drainage for flood prevention or alleviation, and plastic pollution, if installed in place of natural earth or more positive measures such as planting flowers, trees or providing natural water features. We want to go further and will consider how we can make sure that our policy and design guidance fully supports habitats and routes for wildlife, as well as halting the threat to wildlife created by the use of artificial grass by developers in new development (noting the importance of some uses of artificial grass such as on sports pitches).

Q.37 How do you think national policy on small scale nature interventions could be strengthened? For example in relation to the use of artificial grass by

developers in new development?

8. Reflecting Local Nature Recovery Strategies in the planning system: The Environment Act has already established that local authorities have a responsibility, including through their planning functions, to have regard to the contents of these strategies. We have committed to bring forward further guidance on how local authorities will be expected to comply with this duty. This will set out how plan and decision making in the planning system can play a complementary role to the objectives of the strategies that are brought forward.

9. Ancient woodlands protection: Working with Defra, we will undertake the promised review of ancient woodlands and ancient and veteran trees protection in the Framework. As it is prescribed in the current system, development can only adversely impact ancient woodland and ancient and veteran trees if there are “wholly exceptional reasons, and a suitable compensation strategy exists”. As part of this review, we will consider the options for further protecting these important habitats through the planning system.

Recognising the food production value of farmland

10. The government’s food strategy highlights that the UK maintains a high degree of food security. The strategy sets out an aim to broadly maintain domestic production at current levels to build the UK’s resilience to future crisis and shocks. We have some of the best performing farms in the world, with 57% of agricultural output coming from just 33% of the farmed land area. To emphasise the important role that our best performing farms have on food security, alongside imperatives such as energy security, we are seeking initial views on increasing the consideration given to the highest value farmland used for food production in the Framework for both plans and decision making.

11. The Framework currently expects that planning policies and decisions should contribute to and enhance the natural and local environment by recognising the wider benefits from natural capital and ecosystem services including the economic and other benefits of the best and most versatile agricultural land. Best and Most Versatile land is defined as grades 1-3a in the Agricultural Land Classification. To build on this, we propose a change to the current Framework footnote 58 by adding detail on the consideration that should be given to the relative value of agricultural land for food production, where significant development of higher quality agricultural land is demonstrated to be necessary, compared to areas of poorer quality land. This should not prevent the achievement of government’s objectives in relation to nature recovery and creation of ecosystem services to enable and offset development elsewhere.

Q.38 Do you agree that this is the right approach to making sure that the food production value of high value farmland is adequately weighted in the planning process, in addition to current references in the Framework on best and most versatile agricultural land?

Climate change mitigation: exploring a form of carbon assessment

12. As committed to in the Net Zero Strategy, we will carry out a fuller review of the National Planning Policy Framework following Royal Assent of the Bill, to ensure they contribute to climate change mitigation and adaptation as fully as possible. This will include reflecting the government's Transport Decarbonisation Plan, to further strengthen the links between planning and transport in pursuing sustainable patterns of development and an improved built environment; and we will expect plans to show how their approach to identifying land should support this. This will form part of the work intended for next year to create a new suite of National Development Management Policies, and to re-focus the National Planning Policy Framework on principles for plan-making. Much of this work to date, including our commitment towards the Future Homes Standard (2025) and Building Standards will help to deliver significant reductions in operational carbon emissions from the built environment, supplementing work on decarbonising our transport network and reducing reliance on fossil fuels. The government has also announced our intention to consult in 2023 on our approach and interventions to mainstream measurement and reduction of embodied carbon.

13. There have been calls to embed a broad form of carbon assessment in planning policy, for example that could apply at local plan-level or could cover emissions that result from locational, design, travel and development choices. However, evidence on their operation and impact, and how local authorities take action on the results, is not clear cut. We are interested in whether effective and proportionate ways of deploying a broad carbon assessment exist, including what they should measure, what evidence could underpin them such as Local Area Energy Plans, and how they may be used in a plan-making context or as a tool for assessing individual developments. This will inform a further consultation on national planning policy in due course. Alongside this, the government intends to consult in 2023 on Quantifiable Carbon Reductions guidance as part of the statutory Local Transport Plans process.

Q.39: What method and actions could provide a proportionate and effective means of undertaking a carbon impact assessment that would incorporate all measurable carbon demand created from plan-making and planning decisions?

Climate adaptation and flood-risk management

14. The National Planning Policy Framework embeds policies on adapting to climate change through the planning system, including designing and shaping sustainable places that are resilient to, and appropriate for, current and future climate change impacts. This has been further strengthened through the July 2021 update, which added express reference to climate change adaptation to the wording of the presumption in favour of sustainable development.

15. Our review of planning policy for development in areas at flood risk, undertaken jointly with Defra and the Environment Agency, also informed the recent changes to the National Planning Policy Framework, including emphasising the importance of considering the impacts of all sources of flooding. We will keep this important aspect of national policy under review to ensure it is sufficiently robust to keep future development safe from floods and to not increase risk elsewhere. This includes reviewing the planning policy approach for areas at the coast in managing and adapting to coastal change and sea level rise.

16. To support practitioners to ensure that development meets the strict policy criteria in relation to flood risk, including the location of development, in August 2022 we published a significantly revised and updated flood risk and coastal change section of the Planning Practice Guidance.

17. In addition, the government has commenced a review of the case for implementing Schedule 3 to the Flood and Water Management Act 2010 concerning Sustainable Drainage Systems (SuDS). The review will ensure that the commencement of Schedule 3 in England will support the objectives of alleviating pressures on the sewer network and reducing flood risk, as well as improving water quality, amenity, biodiversity, and rainwater harvesting. If implemented, this Schedule would introduce standards for new sustainable drainage systems as well as making connection to public sewers conditional of approval that the drainage system meets the national standards. government will update on the outcome of this review shortly.

18. Alongside this we will review policy and guidance in relation to the production of Strategic Flood Risk Assessments to encourage maximum coverage and more frequent updates to ensure up-to-date assessments are available to support both plan preparation and decision making. Taken together, this will ensure that flood risk is appropriately considered and will improve the speed and effectiveness of decisions.

19. Stakeholders have suggested that planning policy should address other climate risks identified in the third Climate Change Risk Assessment, such as overheating and water scarcity, and that it should help put more focus on nature-based solutions and multi-functional benefits. This would be beneficial for ensuring future development is resilient to changes in climate, beyond the role of building regulations. For example, the provision of green infrastructure in new development can aid climate change adaptation and improve resilience to extreme weather events. In doing so it can provide a pleasant environment, have a positive impact on people's health and well-being, enhance biodiversity, assist with water management, and contribute towards cooling and shading to counter overheating. In addition, the latest assessment of climate risk to the UK includes 61 risks and opportunities, and government is working to develop a third National Adaptation Programme for the UK that will address these. Any changes needed for adaptation in the National Planning Policy Framework will include considering any changes required to reflect the third National Adaptation Programme, governments policy response to the latest assessment of UK climate risk, the third Climate Change Risk Assessment.

Q.40 Do you have any views on how planning policy could support climate change adaptation further, including through the use of nature-based solutions which provide multi-functional benefits?

Chapter 8 – Onshore wind and energy efficiency

1. The dramatic rise in global energy prices and Russia’s invasion of Ukraine has demonstrated how crucial it is that we build a strong, home-grown renewable energy sector to further reduce our reliance on expensive and imported fossil fuels. The government’s [Net Zero Strategy \(https://www.gov.uk/government/publications/net-zero-strategy\)](https://www.gov.uk/government/publications/net-zero-strategy) set out a clear vision for decarbonising and transforming the way energy is produced and used. This includes bringing forward the government’s goal of a fully decarbonised power system by 2035 (subject to security of supply) which requires a step change in deploying renewable technologies. Reflecting our commitments in the Conservative Party’s 2019 manifesto, this government is serious about delivering a cheaper, greener and more secure energy supply, so we need to consider all our options for securing it.

2. As committed to in the Secretary of State for Levelling Up, Housing and Communities’ [written ministerial statement of 6 December \(https://questions-statements.parliament.uk/written-statements/detail/2022-12-06/hlws406\)](https://questions-statements.parliament.uk/written-statements/detail/2022-12-06/hlws406), we are therefore consulting on changes to planning policy for onshore wind to deliver a more localist approach that provides local authorities more flexibility to respond to the views of their local communities. We are also proposing changes to the National Planning Policy Framework to fulfil commitments in the British Energy Security Strategy to support the repowering of onshore wind and review the barriers when installing energy efficiency measures.

Enabling the repowering of existing onshore wind turbines

3. As one of the earliest renewable technologies to deploy, a number of onshore wind turbines will be starting to reach the end of their design life over the next few years. The [British Energy Security Strategy \(https://www.gov.uk/government/publications/british-energy-security-strategy\)](https://www.gov.uk/government/publications/british-energy-security-strategy) set out a commitment to support the repowering of existing onshore wind sites when they require updating or replacement. With advances in technology this process can enhance capacity and provide new opportunities for communities to benefit. Repowering existing wind sites, a process involving replacing the old turbines with more powerful and efficient models that use the latest technology, will allow us to sustain and, in many cases, increase output from the current onshore wind fleet, while using fewer turbines overall. Failure to do so would mean significant losses of existing cheap electricity generation and would also mean needing to build new infrastructure elsewhere as a substitute, increasing pressure on the environment and local communities.

4. We propose making changes to Paragraphs 155 and 158 of the existing National Planning Policy Framework to enable the re-powering of renewable and low carbon energy where planning permission is needed, and providing that the impacts of any development proposal are or can be made acceptable in planning terms.

Q.41: Do you agree with the changes proposed to Paragraph 155 of the existing National Planning Policy Framework?

Q.42: Do you agree with the changes proposed to Paragraph 158 of the existing National Planning Policy Framework?

Introducing more flexibility to plan for new onshore wind deployment

5. The National Planning Policy Framework currently expects that for any proposed wind energy development to be considered acceptable, it should be located in areas identified as suitable in the development plan and following consultation, it can be demonstrated that the planning impacts identified by the affected local community have been fully addressed and the proposal has community backing. These policies were introduced to national planning policy in 2015, but today in the midst of an energy crisis, it is right that we review the policy based on the most up-to-date evidence - to give communities a say on what is built in their area.

6. Onshore wind is an efficient, cheap and widely supported technology – we know that achieving net zero and meeting the UK’s legally binding decarbonisation targets will require an increase in locally supported onshore wind. Technological advancements means that it can generate at closer to maximum potential, and for longer. The costs of the technology have fallen dramatically, and it is now amongst the cheapest forms of electricity generation in the UK today. The Public Attitudes Tracker published by the Department for Business, Energy and Industrial Strategy shows that onshore wind deployment is supported by 78% of the population.

7. Nevertheless, we recognise that, with taller and more visible turbines, there is a greater range of opinions about the impact of onshore wind on local communities. We continue to believe that decisions on onshore wind are best made by local authorities, in consultation with their communities. To deliver this, and our commitments in the British Energy Security Strategy, we have announced our intention to consult on a more localist approach that provides local authorities more flexibility to respond to the views of their local communities. Our proposed changes to the existing National Planning Policy Framework Footnote 54 will ensure that:

- Permission is predicated on satisfactorily addressing the planning impacts of onshore wind projects as identified by local communities, and on demonstrable local support for the scheme, learning from best practice and using new digital engagement techniques.

- Local authorities have a range of routes to demonstrate their support for certain areas in their boundaries to be suitable for onshore wind, outside the overly rigid requirement for onshore wind sites to be designated in the development plan.

8. We have published updated guidance about community engagement to help set out our expectations for developers. The updated guidance articulates our expectation that developers go further in their engagement with communities, such as investing in digital and online methods of engagement and revising the size and layout of projects in response to community feedback. To ensure host communities can participate and benefit from onshore wind energy, we will:

- retain regulations that require onshore wind developers to consult with the local community at pre-application stage, so communities will retain the right to have a say before an application is submitted;
- provide further information in planning practice guidance to explain how it can be demonstrated that the planning impacts identified by the affected local community have been satisfactorily addressed and the proposal has community support, reflecting our proposed changes to the Framework;
- retain current legislation that provides for all onshore wind applications to be considered by local planning authorities rather than through the Nationally Significant Infrastructure Projects regime; and
- consult in the coming months on the development of local partnerships with supportive communities who wish to host onshore wind in exchange for community benefits such as discounted energy bills; delivering our commitment on this in the British Energy Security Strategy.

Q.43: Do you agree with the changes proposed to footnote 54 of the existing National Planning Policy Framework?

Do you have any views on specific wording for new footnote 62?

Barriers to energy efficiency

9. We have also committed to review the practical planning barriers that households can face when installing energy efficiency measures in their homes, such as improved window glazing and better insulation; and particularly relevant to conservation areas and listed buildings. To help the delivery of such measures, we have proposed adding new Paragraph 161 to the National Planning Policy Framework to clarify that significant weight should be given to the importance of energy efficiency through adaptation of buildings, whilst ensuring that local amenity and heritage continues to be protected.

Q.44: Do you agree with our proposed new Paragraph 161 in the National Planning Policy Framework to give significant weight to proposals which allow the adaptation of existing buildings to improve their energy performance?

Chapter 9 - Preparing for the new system of plan-making

1. Although 95% of local planning authorities have now adopted a Local Plan, we know that only around 40% of these authorities have adopted within the last 5 years. It is critical that work should continue on plans before the new system is in place, to ensure that the planning system can maximise its role in helping everyone shape the future of the areas they live in, maximising opportunities to enhance the environment and provide the jobs and homes needed locally. Ensuring a steady flow of plans will allow land continues to come forward and help to smooth the transition to the new system.

2. The Bill sets out reforms to the local plan-making system. Plans will be produced more quickly and the content of plans will be simplified. Plans will also enjoy greater weight in the decision-making process, limiting the circumstances when unplanned development could be approved – in particular through the application of the presumption in favour of sustainable development (the so called ‘tilted balance’). This will result in a more effective system that is easier to engage with, giving greater certainty to those affected by and use the system, whilst providing communities with a greater say in how they want their areas to develop. Subject to parliamentary approval, we expect these plan-making reforms to be implemented from late 2024. Here, we set out the proposed timeline for shifting to this new system.

Giving time to finalise and adopt plans already in development before the reformed plan-making system is introduced

3. The reformed plan-making system is intended to be introduced in late 2024. In the meantime, we recognise the importance of ensuring that as many authorities as possible can take advantage of the policy changes outlined in this wider document, which are expected to take effect from spring 2023. Ensuring that plans can progress in the short term will allow land for development to continue to come forward and help to smooth the transition to the new plan-making system. Authorities with an up-to-date local plan in place will be in the best possible position to adapt to the reforms provided for in the Bill.

4. Therefore, we are proposing that plan makers will have until 30 June 2025 to submit their local plans, neighbourhood plans, minerals and waste plans, and spatial development strategies for independent examination under the existing legal framework; this will mean that existing legal requirements and duties, for example the Duty to Cooperate, will still apply.

5. We are also proposing that all independent examinations of local plans, minerals and waste plans and spatial development strategies must be concluded, with plans adopted^{[\[footnote 8\]](#)}, by 31 December 2026. These plans will be examined under the current legislation.

Q.45: Do you agree with the proposed timeline for finalising local plans, minerals and waste plans and spatial development strategies being prepared under the current system? If no, what alternative timeline would you propose?

Setting out the timeline for preparing local plans, spatial development strategies, minerals and waste plans and supplementary plans under the reformed system

6. Under the reformed system, which we expect to go live in late 2024, there will be a requirement for local planning authorities and minerals and waste planning authorities to start work on new plans by, at the latest, 5 years after adoption of their previous plan, and to adopt that new plan within 30 months.

7. Authorities that have prepared a local plan, spatial development strategy or minerals and waste plan which is more than 5 years old when the new system goes live (and are not proactively working towards the 30 June 2025 submission deadline under the current system, as set out above), will be required to begin preparing a new style local plan, spatial development strategy or minerals and waste plan straight away.

8. Authorities that have prepared a local plan, spatial development strategy or minerals and waste plan which is less than 5 years old when the new system goes live will not be required to begin preparing a new-style plan until their existing plan is 5 years old. So, for example, if an authority last adopted a local plan on 31 March 2022, the preparation of a new plan must start by 1 April 2027. For a plan adopted in mid-December 2026, the preparation of a new plan must start by mid-December 2031. The period of 5 years applies from the date of adoption. Authorities can begin preparing a new plan sooner if they wish.

9. Authorities that do not meet the 30 June 2025 submission deadline for 'old-style' plans (as set out previously) will need to prepare plans under the new plan-making system.

10. We understand the importance of mitigating the risks of moving from one system of plan-making to the other, particularly the risk of local planning authorities being exposed to speculative applications while preparing their first new-style plan, if their existing local plan becomes out-of-date shortly after the new system is introduced. Therefore, in addition to the arrangements described above, we also intend to set out that plans that will become more than 5 years old during the first 30 months of the new system (i.e. while the local planning authority is preparing their new plan), will continue to be considered 'up-to-date' for decision-making purposes for 30 months after the new system starts.

11. Additionally, where a plan has been found sound subject to an early update requirement, and the Inspector has given a deadline to submit an updated plan within the first 30-months of the new system going live, this deadline will be extended to 30-months after the new system goes live. This will ensure that local

planning authorities are protected from the risk of speculative development while preparing their new plan.

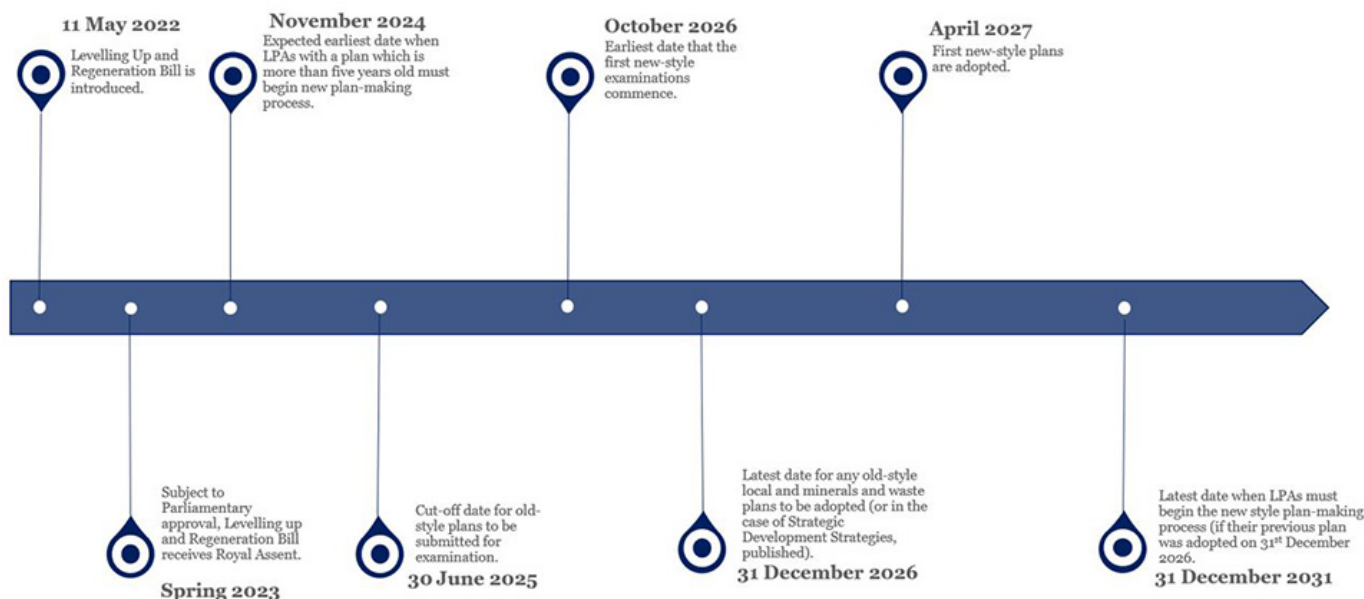

Neighbourhood plans

12. We are proposing that neighbourhood plans submitted for examination after 30 June 2025 will be required to comply with the new legal framework. 'Made' neighbourhood plans prepared under the current system will continue to remain in force under the reformed system until they are replaced.

Supplementary planning documents

13. In the reformed planning system, authorities will no longer be able to prepare supplementary planning documents (SPDs). Instead, they will be able to prepare Supplementary Plans, which will be afforded the same weight as a local plan or minerals and waste plan. We are proposing that when the new system comes into force (expected late 2024), existing SPDs will remain in force for a time-bound period; until the local planning authority is required to adopt a new-style plan. Current SPDs will automatically cease to have effect at the point at which authorities are required to have a new-style plan in place. For example, if a planning authority's plan is more than 5 years old when the new system comes into force and that planning authority is required to begin new-style plan-making straight away, their SPDs will expire on the date at which they are required to adopt a new-style plan i.e. 30 months after they commence plan preparation. Where an authority is working towards the 30 June 2025 deadline and they miss it, their SPDs will expire 30 months after that date i.e. at the end of December 2027.

Timeline for transitioning to the reformed plan-making system

Plain text version:

- 11 May 2022, Levelling Up and Regeneration Bill is introduced.
- Spring 2023, Subject to Parliamentary approval, Levelling Up and Regeneration Bill receives Royal Assent.
- November 2024, Expected earliest date when LPAs with a plan which is more than 5 years old must begin new plan-making process.
- 30 June 2025, Cut-off date for old-style plans to be submitted for examination.
- October 2026, Earliest date that the first new-style examinations commence.
- 31 December 2026, Latest date for any old-style local and minerals and waste plans to be adopted (or in the case of Strategic Development Strategies, published).
- April 2027, First new-style plans are adopted.
- 31 December 2031, Latest date when LPAs must begin the new style plan-making process (if their previous plan was adopted on 31 December 2026).

Q.46: Do you agree with the proposed transitional arrangements for plans under the future system? If no, what alternative arrangements would you propose?

Q.47: Do you agree with the proposed timeline for preparing neighbourhood plans under the future system? If no, what alternative timeline would you propose?

Q.48: Do you agree with the proposed transitional arrangements for supplementary planning documents? If no, what alternative arrangements would you propose?

Chapter 10 – National Development Management Policies

1. This chapter sets out the case for National Development Management Policies and our initial thinking on their scope and content. These will have a prominent role in making decisions on planning applications, and it will be important that their production benefits from the input of local authorities, communities and other interests. Further consultation will follow on our proposals for the draft National Development Management Policies themselves following passage of the Bill. This section therefore is not seeking views on the specific policies, but rather the principles for producing them.

2. The Bill includes clauses to improve how plans are made and create a clearer, more accessible framework for making decisions on planning applications. This includes giving all parts of the ‘development plan’ (local plans, neighbourhood plans and other statutory plans) more weight in decisions so that there must be strong material considerations to depart from them. Creating a concise set of National Development Management Policies for nationally important matters will complement this. As set out elsewhere in this consultation, we are proposing transitional arrangements for plans in moving to the reformed system, so that plan-making may continue prior to National Development Management Policies being finalised.

What are National Development Management Policies?

3. National Development Management Policies are proposed in Clauses 83 and 84 of the Bill (as introduced to the Commons; these are now 86 and 87 in the version introduced to the Lords). These would be given the same weight in certain planning decisions as policies in local plans, neighbourhood plans and other statutory plans (and could, where relevant, also be a material consideration in some other planning decisions, such as those on Nationally Significant Infrastructure Projects). It is our intention that National Development Management Policies would cover planning considerations that apply regularly in decision-making across England or significant parts of it, such as general policies for conserving heritage assets, and preventing inappropriate development in the Green Belt and areas of high flood risk.

4. The existing National Planning Policy Framework already contains development management policies of this type that can be significant ‘material considerations’ when assessing planning applications. Currently, these important national policies do not have any statutory status. We are proposing that the starting point for creating National Development Management Policies would be these existing parts

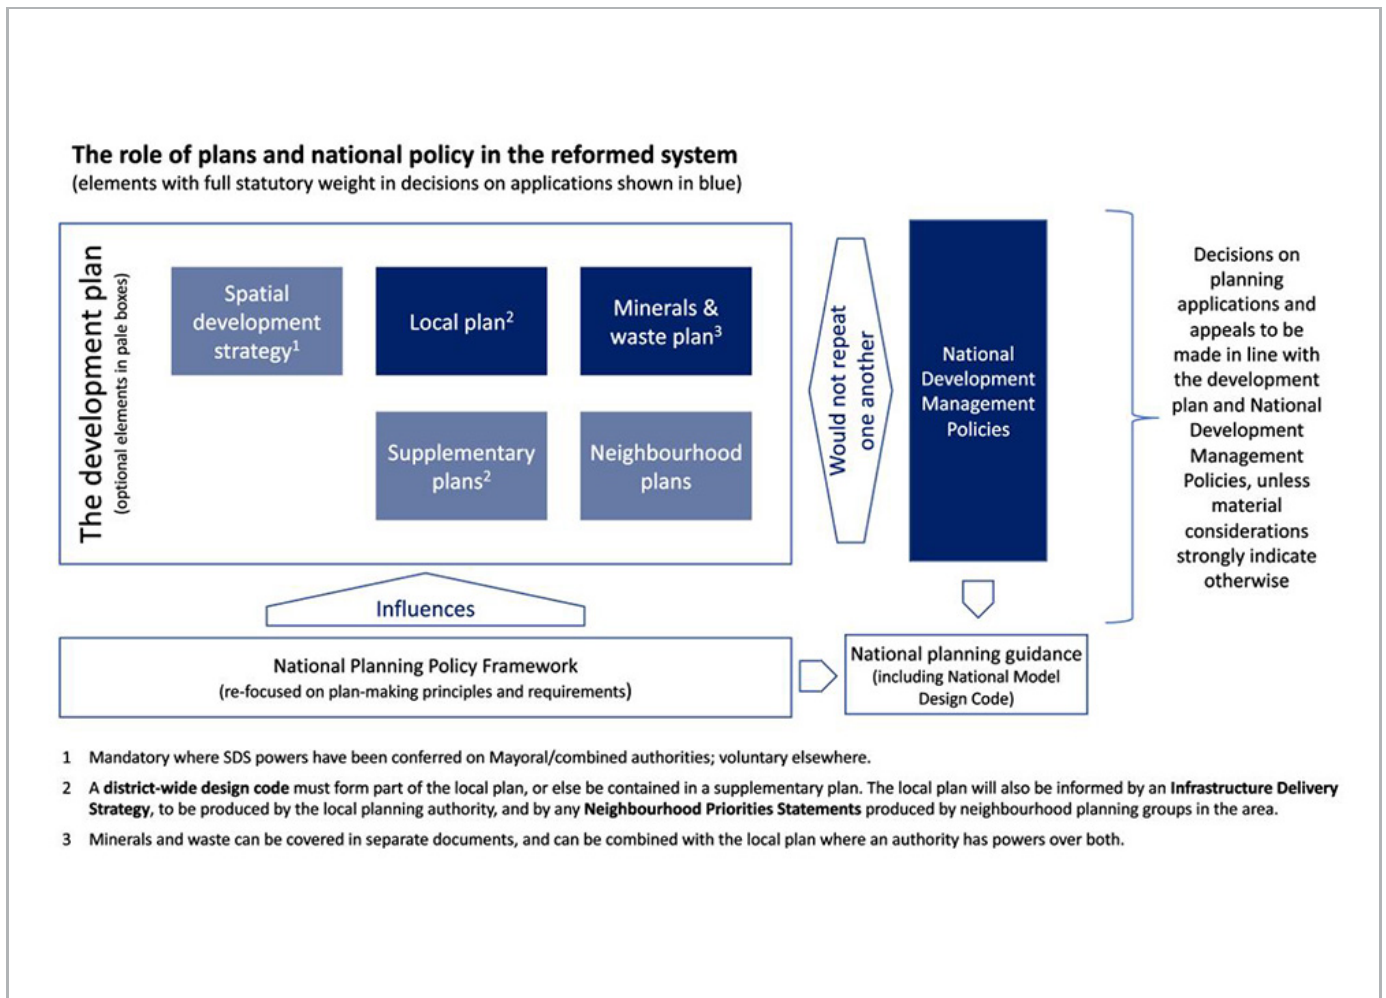

of the National Planning Policy Framework which apply to decision-making. However, we welcome views on whether there are other topics that should be added and have included consultation questions later in this chapter.

5. The introduction of National Development Management Policies will aid decision making by making the basis for decisions clearer. They would not impinge on local policies for shaping development, nor direct what land should be allocated for particular uses during the plan-making process. These will remain matters for locally-produced plans.

6. The policies themselves would, following passage of the Bill, be designated by direction of the Secretary of State. Before this could happen, full public consultation would take place on the draft policies, building on the initial views which we are seeking now.

7. Our current intention is that National Development Management Policies, once introduced, would be set out in a separate document to the rest of the National Planning Policy Framework. The latter would be re-focused on principles for plan-making (i.e. the general approach to allocating land for development in plans and protecting areas of value) and would not carry the statutory weight conveyed by the Bill, although they would still be capable of acting as material considerations where relevant.

8. The below diagram illustrates how National Development Management Policies would work with the different components of the development plan, providing a framework for informing and deciding planning applications.

Plain text version:

The role of plans and national policy in the reformed system (elements with full statutory weight in decisions on applications shown in blue).

National Planning Policy Framework (re-focused on plan making principles and requirements).

Arrow pointing above with the word influences inside.

The Development Plan (optional elements in pale boxes)

Spatial development strategy¹ (pale) – 1 Mandatory where SDS powers have been conferred on Mayoral/combined authorities; voluntary elsewhere.

Local plan² (blue) – 2 A district-wide design code must form part of the local plan, or else be contained in a supplementary plan. The local plan will also be informed by an Infrastructure Delivery Strategy, to be produced by the local planning authority, and by any Neighbourhood Priorities Statements produced by neighbourhood planning groups in the area.

Supplementary plans² (pale) - 2 A district-wide design code must form part of the local plan, or else be contained in a supplementary plan. The local plan will also be informed by an Infrastructure Delivery Strategy, to be produced by the local planning authority, and by any Neighbourhood Priorities Statements produced by neighbourhood planning groups in the area.

Minerals & waste plan³ (blue) – 3 Minerals and waste can be covered in separate documents, and can be combined with the local plan where an authority has powers over both.

Neighbourhood plans (pale)

Two-way arrow pointing between The Development Plan and National Development Management Policies (blue).

Arrows from National Development Management Policies and National Planning Policy Framework to National planning guidance (including National Model Design Code).

Close brace encompassing all text (except National Planning Policy Framework box and National planning guidance boxes) – Decisions on planning applications and appeals need to be made in line with the development plan and National development Management Policies, unless material considerations strongly indicate otherwise.

The Case for National Development Management Policies

9. The creation of National Development Management Policies is part of the government's ambition to make it easier to produce plans and foster a genuinely plan-led system, leading to clearer and more certain decision making.

10. Through responses to 2020's Planning for the Future White Paper and wider engagement with stakeholders, we have heard that:

- Local plans are often hundreds of pages long, but can try to replicate many aspects of national planning policy, such as general policies for controlling development in the Green Belt, or policies on nationally-recognised heritage assets. Feedback from local authorities is that they do so because national policy has no statutory status, unlike the development plan. Removing this material from local plans would help to make them more accessible and engaging for users as well as cheaper to produce;
- Unnecessary time can be spent at examination testing such generic development management policies and establishing whether they are consistent with the National Planning Policy Framework, rather than dealing with locally-specific matters;
- There are a number of issues of national importance – such as the Green Belt – where many accept that policies for controlling development should be set nationally; and
- Small builders in particular struggle to follow multiple different detailed local plan policies on the same issues, making it harder to build within different local authority areas.

11. With this in mind, the government believes the case for National Development Management Policies is 5-fold:

- They will help local authorities produce swifter, slimmer plans by removing the need to set out generic issues of national importance such as policies for protecting the Green Belt;
- They will make plans more locally-relevant and easier for communities and other users to digest;
- It will be easier for applicants to align their proposals with national and local policy requirements and, where they wish, to go beyond them. We expect this to be particularly valuable for small and medium enterprises: it will support our small and medium sized builders to build more of the homes and create more of the skilled jobs that people want to see in their communities;
- They will provide greater assurance that important policy safeguards which apply nationally, or to significant parts of England (such as protections for areas at risk of flooding, policy on climate change, and policies to protect the Green Belt) will be upheld with statutory weight and applied quickly across the country, including when any changes are made; and
- They will mean that this framework of common national policies can guide decisions even if the local plan is significantly out-of-date and cannot be relied upon. For example, they will ensure that national protections for things safeguarded solely through planning policy – local wildlife sites for example – have clear statutory status equivalent to an up-to-date plan.

The scope of National Development Management Policies

12. The government's initial view is that National Development Management Policies would fall within 3 broad categories:

1. Existing policies aimed at decision-making already provided within the National Planning Policy Framework, subject to these being reviewed on a case-by-case basis so that the rationale for their inclusion is clear;
2. Selective new additions to reflect new national priorities, for example net zero policies that it would be difficult to develop evidence to support at a district level, but which are nationally important.
3. Selective new additions to close 'gaps' where existing national policy is silent on planning considerations that regularly affect decision-making across the country (or significant parts of it).

13. We also propose that any National Development Management Policies would adhere to a number of principles:

- Covering only matters that have a direct bearing on the determination of planning applications;
- Limited to key, nationally important issues commonly encountered in making decisions on planning applications across the country (or significant parts of the country); and
- solely addressing planning issues, in other words that concern the development and use of land. National Development Management Policies would not address subjects which are regulated through other legislation, for example the building regulations or acts relating to public health, pollution, and employment; although we are minded to retain the scope for optional technical standards to be set locally through plans, where these remain appropriate, so that local planning authorities can go above certain minima set through building standards.

14. We will also want to make sure that National Development Management Policies are drafted in a clear, concise and consistent manner, and avoid ambiguities, so that they are easy to understand and apply by applicants, local planning authorities and other users. The policies will also need to be capable of being accessed easily in a digital format by a wide range of users.

Q.49 Do you agree with the suggested scope and principles for guiding National Development Management Policies?

Q.50 What other principles, if any, do you believe should inform the scope of National Development Management Policies?

15. Indicative examples of 'gaps' where national policy is silent on common decision-making issues, which National Development Management Policies might address, are provided in the table below. This is not an exhaustive list and is subject to considering the outcome of this consultation, as well as a future consultation on detailed policy proposals.

Topic	Rationale for including
Carbon reduction in new developments	A national policy on carbon measurement and reduction could set a baseline whilst enabling authorities to set further measures in their own plans based on parameters set in national policies, perhaps through an optional technical standard to allow for consistency and sound decision making. Chapter 7 of this prospectus outlines our thinking on how national policy could go further on the environment and climate change.
Allotments	A policy issue that has relevance across many authorities who seek to protect this land use against development. This may not require an individual National Development Management Policy but, instead, might be incorporated into a wider policy on protection of green spaces.
Housing in town centres and built-up areas	National policy does not currently contain a policy explicitly encouraging or supporting the development of housing in built-up areas that are accessible and connected by sustainable transport modes. Local plans frequently contain this sort of policy, so creating a National Development Management Policy for this could help standardise expectations across the country and deliver more housing in suitable areas. This could be included in a general policy about housing on brownfield land, space above shops, or town centres (potentially building upon the paragraph 86(f) of the existing National Planning Policy Framework).

Q.51: Do you agree that selective additions should be considered for proposals to complement existing national policies for guiding decisions?

Q.52: Are there other issues which apply across all or most of England that you think should be considered as possible options for National Development Management Policies?

The relationship between National Development Management Policies and locally-produced plans

16. The Bill retains considerable scope for local planning authorities to produce their own local plan policies on distinctly local issues, and for neighbourhood and other statutory plans to do the same. Just a few examples of where local policies could be developed might be:

- A university city in which student housing has had a significant impact on the wider housing market;

- A London borough in which the construction phase of numerous basement developments is having a significant effect on residential living conditions;
- A town which contains an important interconnected business cluster with very specific accommodation requirements and expansion needs; or
- A district with issues of coastal management or of subsidence which requires a bespoke policy tailored to the local circumstances.

17. The new ‘gateway’ stages during plan preparation, and at the local plan examination, will provide opportunities for local planning authorities to explain the local policies they wish to include and (where relevant) demonstrate their consistency with National Development Management Policies.

18. The Bill would preclude new plans from including policies which duplicate or are inconsistent with National Development Management Policies. This would ensure that there is a clear demarcation between locally prepared plans and national policy, minimising any risk of conflict between them.

19. The Bill also provides that National Development Management Policies would take precedence where there is conflict between them and development plan policies when making a decision on a planning application. This has been included as a safeguard where plans have become out-of-date and important national policies, for example on the environment, need to be reflected fully in decisions. In practice, the existing National Planning Policy Framework often outweighs plans where such situations arise. However, we expect inconsistencies to arise much less frequently in future, both because our reforms should mean fewer out-of-date plans, and because of the clearer distinction being drawn between the role of national policy and that of locally-produced plans.

Chapter 11 – Enabling Levelling Up

1. This chapter sets out a number of areas where changes to national planning policy might be made to reflect the ambitious agenda set out in Levelling Up White Paper published in February this year. These changes would make sure that planning policy supports businesses across the country drive economic growth and deliver on our objective to boost productivity, pay, jobs and living standards, especially in those places where they are lagging.

2. The Bill and many of the changes proposed in this document will empower local leaders and give them more tools to level up their communities, build the beautiful homes that will give young people a secure path to home ownership, and boost pride in place.

3. However, national planning policy and the planning system could enable developments that contribute to the success of many more of the levelling up missions. Asking for beauty and developing close-knit neighbourhoods can raise not just pride in place, but wellbeing and even health outcomes. Innovative design and placemaking can further contribute to improved social outcomes, from lower obesity rates to less antisocial behaviour. And supporting British businesses to build the lab space and commercial development necessary to raise private sector

investment in research and development outside the Greater South East, and the transport and digital connectivity required for people to work in the place they can be most productive, can get our economic engine firing on all cylinders.

4. We are therefore interested in any and all bold, innovative ideas through which the planning system can better enable the government to achieve its levelling up missions.

Q.53: What, if any, planning policies do you think could be included in a new Framework to help achieve the 12 levelling up missions in the Levelling Up White Paper?

Levelling up and boosting economic growth

5. Levelling up is the central objective of this government. Building on the Levelling Up White Paper and the Bill, we want to ensure that national planning policies empower local leaders across the country to attract investment, drive economic growth and grow the private sector.

6. When we undertake a full review of the Framework, we propose to reshape the existing 'Building a strong competitive economy' policies to align more closely with the economic vision set out in the Levelling Up White Paper. In order to make this happen, we intend to:

a. Make sure that local plans in every part of the country support new business investment and give existing business, including SMEs, the confidence to expand and grow.

b. Support the sectors and businesses that will drive up productivity. We want technology companies, life sciences and all those involved in Research and Development to invest more and grow more in every part of country – in line with the levelling up R&D mission.

c. Spread financial capital and investment to the places, projects and people that need it most. We want to empower local decision makers in those places to say yes to commercial development if it will drive economic growth, deliver new jobs, and stimulate innovation and productivity

7. Overall, we want an approach that will support local planning authorities to attract new business investment to areas that have lagged in the past; whilst making sure that those parts of the country with high levels of productivity can continue to capitalise on their performance and potential and attract investment as they do now. We also want to make sure that planning policies/decisions support SMEs grow and develop.

Q.54: How do you think the Framework could better support development that will drive economic growth and productivity in every part of the country, in

support of the levelling up agenda?

8. In your response, we are interested in considering developments of particular significance to levelling up, such as: science laboratory facilities, buildings to support Research and Development and where development proposals would enable the creation of high skilled, well-paid jobs; especially in those places lagging behind.

9. Alongside this, there are other areas where the planning system can support the government's agenda to level up across the UK. The Levelling Up White Paper set out that our second-tier cities lag behind both similar European countries' second-tier cities, and also behind the UK's national average. This suggests a significant under-performance of our cities relative to their economic potential. This underperformance is driven, in part, by the fact that our cities and their urban cores are less dense than their European counterparts. At an economic level, population density - supported by the right houses in the right places - can increase the labour pool of an economic region and contribute to improved productivity. At a community level, increasing the density of urban cores could revitalise high streets, and make public and active transport systems more affordable.

10. The White Paper set out how we plan to use the £1.8bn investment in brownfield and infrastructure projects to unlock the delivery of up to 160,000 homes across England. This will focus on housing around existing and planned transport infrastructure to create sustainable neighbourhoods that enable walking, wheeling and cycling to work supported by high quality local public transport. In support of levelling up, the UK government will target the majority of delivery on brownfield sites outside London and the south east. As part of the wider Framework review, we therefore want to make sure that national planning policies are fully supportive of our aim to gently densify our urban centres, especially outside London and the south east. In previous chapters we pose questions on boosting small sites and mansard roofs, but we are interested in wider proposals for boosting existing planning policies on brownfield land.

Q.55: Do you think that the government could go further in national policy, to increase development on brownfield land within city and town centres, with a view to facilitating gentle densification of our urban cores?

Levelling up and boosting pride in place

11. As outlined above, levelling up is not only an economic agenda but a social one too. The Levelling Up White Paper contains missions not only to increase prosperity but also improve the length and quality of people's lives, such as those missions on health, wellbeing, and pride in place.

12. In order deliver on these missions and to feel a sense of pride in place, we must all feel safe to walk our streets. The government's Safer Streets Fund has already allocated millions of pounds to enable local areas across England and

Wales to put in place innovative crime prevention measures. Over 4 rounds of the fund, £120 million has been invested. As well as providing funding to prevent neighbourhood crime, crime and antisocial behaviour in public spaces, the current round of the fund also places particular focus on taking steps to prevent violence against women and girls.

13. Chapter 8 of the existing Framework currently sets out that, “planning policies and decisions should aim to achieve healthy, inclusive and safe places and also “planning policies and decisions should promote public safety and take into account wider security and defence requirements.” In line with HMG’s strategy on tackling violence against women and girls, however, we want to understand if national planning policy should do more to enable local authorities to consider the safety of women and girls, and other vulnerable groups, when setting policies or making decisions.

Q.56: Do you think that the government should bring forward proposals to update the Framework as part of next year’s wider review to place more emphasis on making sure that women, girls and other vulnerable groups feel safe in our public spaces, including for example policies on lighting/street lighting?

Chapter 12 - Wider changes to national planning policy in the future

1. This chapter sets out areas where changes to national planning policy are likely to be needed to reflect the Bill and other aspects of government policy. Some of these will apply to plan-making, whilst others may be reflected in National Development Management Policies. The list presented in the table below is indicative and not exhaustive, and we are not consulting on specific changes at this stage. It is mapped against the current chapter structure in the National Planning Policy Framework, although the arrangement of chapters may change during the process of revision. We will also consider opportunities to incorporate existing written ministerial statements into revised national planning policy, such as that on First Homes policy.

2. The government will undertake a full consultation on a revised National Planning Policy Framework and proposals for National Development Management Policies once the Bill has completed its passage through Parliament.

Existing National Planning Policy Framework chapter

Aspects of policy which may require updating

Achieving sustainable development

Amendments to reflect the importance of fostering beautiful places, better environmental and health outcomes, delivering appropriate infrastructure (including sustainable transport provision) and effective community engagement, in the wider context of promoting levelling up.

The presumption in favour of sustainable development may also need amending to reflect the introduction of National Development Management Policies (once designated).

We are considering how to align the NPPF with the Environment Act and how to make government's priorities for the environment clear and to ensure these are given sufficient weight.

Plan-making

Changes to reflect the amendments to plan-making made by the Bill, including:

- replacing the statutory duty to cooperate (which would be abolished by the Bill) with a new 'Alignment Policy' to secure appropriate engagement between authorities where strategic planning considerations cut across boundaries. This will be tested at Examination and, importantly, unlike the current system authorities and Inspectors would have the ability to amend Plans to improve alignment;
 - any changes to the 'soundness' tests for assessing draft plans which may be appropriate so that plan examinations are proportionate;
 - how infrastructure delivery strategies are to be prepared;
 - the importance of effective community engagement in plan-making, including through digital means;
 - taking Neighbourhood Priorities Statements into account when preparing local plans; and
 - other procedural changes to plan-making, including a fixed timetable for local plan production, the role of gateway checks, new data standards, streamlined evidence requirements and the introduction of Environmental Outcome Reports.
- We are also considering how to encourage wider uptake of strategic planning to understand and resolve environmental issues in a joined up way. Strategic planning also needs to

Existing National Planning Policy Framework chapter

Aspects of policy which may require updating

	consider rural communities to ensure that local policies are tailored to their different needs.
Decision-making	Changes to reflect the role of National Development Management Policies in decision-making, the introduction of Environmental Outcome Reports for assessing relevant development proposals, the importance of digital methods of community engagement, and to place greater emphasis on planning enforcement, with increased weight against intentional unauthorised development.
Delivering a sufficient supply of homes	Changes to: support the Bill's provisions to strengthen control over the build-out of sites with permission for residential development; enshrine our commitment to lifting the 5-year housing supply requirement where plans are fewer than 5 years old; and carry forward the more immediate changes we are consulting on in this document.
Building a strong, competitive economy	As set out in the Levelling Up White Paper, we propose to consult on a more positive framework for supporting economic development, including reviewing the approach to supporting employment land, and the consideration of supply chain and connectivity issues, including responding to information gathered as part of the Future of Freight Call for Evidence.
Ensuring the vitality of town centres	We propose to review the approach to town centre and out-of-centre development in the light of the Use Class Order changes.
Promoting sustainable transport	We propose to assess what changes are needed to reflect the government's commitment to encourage active travel through the 'Gear Change' programme, the forthcoming update to Local Transport Plan's Guidance, any update to Manual for Streets and wider work to reduce carbon consumption from transport planning choices as set out in the Transport Decarbonisation Plan. We also propose to review policy on the freight sector and supply chains infrastructure, such as lorry parking, warehouse space and rail freight hubs. This will draw on findings from the government's 'Future of Freight' call for evidence which will be launched in due course.

Existing National Planning Policy Framework chapter

Aspects of policy which may require updating

Achieving well-designed places	Changes to reflect provisions in the Bill on mandatory authority wide design codes and supplementary plans.
Protecting Green Belt land	Amendments to reflect the commitment in the Levelling Up White Paper to bringing forward measures to ‘green’ the Green Belt, to improve its environmental and recreational value.
Meeting the challenge of climate change, flooding and coastal change	Changes to reflect and incorporate the immediate proposals being consulted on in this document, as well as any further changes needed to reflect our commitment to making sure that national policy goes as far as possible in addressing climate change.
Conserving and enhancing the natural environment	<p>Proposed changes to:</p> <ul style="list-style-type: none"> - set out how Local Nature Recovery Strategies, introduced by the Environment Act, should be given weight in the plan-making process; - reflect updated guidance on addressing nutrient pollution, including expectations on strategic mitigation in sensitive catchment areas; - reflect a review of policy on ancient woodland, as agreed in the passage of the Environment Act 2021; - reflect the introduction of mandatory Biodiversity Net Gain from 2023; <p>incorporate nature into development through better planning for green infrastructure and nature-friendly buildings.</p>
Conserving and enhancing the historic environment	Amendments to reflect the changed status of some historic designations through the Bill

Chapter 13 - Practical changes and next steps

1. National policy, like plans, needs to be accessible and user friendly. The creation of National Development Management Policies, the Bill’s digital reforms and supporting work to embed common data standards and the use of digital platforms

create opportunities to improve the way that national policies are presented and used. For example, it would help local authorities producing digital local plans, and those using them, if national policies were in a format that enabled them to be accessed in an integrated way.

2. We therefore intend to explore the creation of a more accessible and interactive, web-based set of national policies (both the statutory National Development Management Policies and the residual National Planning Policy Framework). PDF versions of policies would be retained for those who need them. As we develop our approach to revising national policy, taking into account the responses to this consultation, we will engage with the sector to inform our approach (e.g. through user research).

Q.57 Are there any specific approaches or examples of best practice which you think we should consider to improve the way that national planning policy is presented and accessed?

3. At present, National Planning Policy for Waste and Planning Policy for Traveller Sites sit alongside the National Planning Policy Framework. As part of the wider changes to national planning policy set out in this document which will become necessary as a result of the Bill – and in particular the creation of separate statutory National Development Management Policies – we will consider how policies for these matters should be set out in future, including which aspects need to form part of the suite of proposals for National Development Management Policies.

4. Once the consultation on the proposals set out in this document has closed and we have analysed the responses, we will publish a response to the consultation aspects.

5. We will use the views received on the approach to National Development Management Policies, to inform our approach to developing more detailed policy options and proposals for full public consultation following passage of the Bill. Proposed changes to the rest of the National Planning Policy Framework (those residual parts aimed at plan-making) will be consulted on at the same time. We also intend to undertake further stakeholder engagement and user research to inform this policy development.

6. Given the formal status which they will have in the reformed planning system, we will ensure that the National Development Management Policies are informed by any required environmental assessments as part of their preparation.

Public Sector Equality Duty

Q.58 We continue to keep the impacts of these proposals under review and would be grateful for your comments on any potential impacts that might arise

under the Public Sector Equality Duty as a result of the proposals in this document.

Chapter 14 – Table of questions

Question Number	Question Wording
1	Do you agree that local planning authorities should not have to continually demonstrate a deliverable 5-year housing land supply (5YHLS) as long as the housing requirement set out in its strategic policies is less than 5 years old?
2	Do you agree that buffers should not be required as part of 5YHLS calculations (this includes the 20% buffer as applied by the Housing Delivery Test)?
3	Should an oversupply of homes early in a plan period be taken into consideration when calculating a 5YHLS later on or is there an alternative approach that is preferable?
4	What should any planning guidance dealing with oversupply and undersupply say?
5	Do you have any views about the potential changes to paragraph 14 of the existing Framework and increasing the protection given to neighbourhood plans?
6	Do you agree that the opening chapters of the Framework should be revised to be clearer about the importance of planning for the homes and other development our communities need?
7	What are your views on the implications these changes may have on plan-making and housing supply?
8	Do you agree that policy and guidance should be clearer on what may constitute an exceptional circumstance for the use of an alternative approach for assessing local housing needs? Are there other issues we should consider alongside those set out above?
9	Do you agree that national policy should make clear that Green Belt does not need to be reviewed or altered when making plans, that building at densities significantly out of character with an existing area may be considered in assessing whether housing need can be met, and that past over-supply may be taken into account?

Question Number	Question Wording
10	Do you have views on what evidence local planning authorities should be expected to provide when making the case that need could only be met by building at densities significantly out of character with the existing area?
11	Do you agree with removing the explicit requirement for plans to be 'justified', on the basis of delivering a more proportionate approach to examination?
12	Do you agree with our proposal to not apply revised tests of soundness to plans at more advanced stages of preparation? If no, which if any, plans should the revised tests apply to?
13	Do you agree that we should make a change to the Framework on the application of the urban uplift?
14	What, if any, additional policy or guidance could the department provide which could help support authorities plan for more homes in urban areas where the uplift applies?
15	How, if at all, should neighbouring authorities consider the urban uplift applying, where part of those neighbouring authorities also functions as part of the wider economic, transport or housing market for the core town/city?
16	Do you agree with the proposed 4-year rolling land supply requirement for emerging plans, where work is needed to revise the plan to take account of revised national policy on addressing constraints and reflecting any past over-supply? If no, what approach should be taken, if any?
17	Do you consider that the additional guidance on constraints should apply to plans continuing to be prepared under the transitional arrangements set out in the existing Framework paragraph 220?
18	Do you support adding an additional permissions-based test that will 'switch off' the application of the presumption in favour of sustainable development where an authority can demonstrate sufficient permissions to meet its housing requirement?
19	Do you consider that the 115% 'switch-off' figure (required to turn off the presumption in favour of sustainable development Housing Delivery Test consequence) is appropriate?

Question Number	Question Wording
20	Do you have views on a robust method for counting deliverable homes permissioned for these purposes?
21	What are your views on the right approach to applying Housing Delivery Test consequences pending the 2022 results?
22	Do you agree that the government should revise national planning policy to attach more weight to Social Rent in planning policies and decisions? If yes, do you have any specific suggestions on the best mechanisms for doing this?
23	Do you agree that we should amend existing paragraph 62 of the Framework to support the supply of specialist older people's housing?
24	Do you have views on the effectiveness of the existing small sites policy in the National Planning Policy Framework (set out in paragraph 69 of the existing Framework)?
25	How, if at all, do you think the policy could be strengthened to encourage greater use of small sites, especially those that will deliver high levels of affordable housing?
26	Should the definition of "affordable housing for rent" in the Framework glossary be amended to make it easier for organisations that are not Registered Providers – in particular, community-led developers and almshouses – to develop new affordable homes?
27	Are there any changes that could be made to exception site policy that would make it easier for community groups to bring forward affordable housing?
28	Is there anything else that you think would help community groups in delivering affordable housing on exception sites?
29	Is there anything else national planning policy could do to support community-led developments?
30	Do you agree in principle that an applicant's past behaviour should be taken into account into decision making?
31	Of the two options above, what would be the most effective mechanism? Are there any alternative mechanisms?

Question Number	Question Wording
32	Do you agree that the 3 build out policy measures that we propose to introduce through policy will help incentivise developers to build out more quickly? Do you have any comments on the design of these policy measures?
33	Do you agree with making changes to emphasise the role of beauty and placemaking in strategic policies and to further encourage well-designed and beautiful development?
34	Do you agree to the proposed changes to the title of Chapter 12, existing paragraphs 84a and 124c to include the word 'beautiful' when referring to 'well-designed places', to further encourage well-designed and beautiful development?
35	Do you agree greater visual clarity on design requirements set out in planning conditions should be encouraged to support effective enforcement action?
36	Do you agree that a specific reference to mansard roofs in relation to upward extensions in Chapter 11, paragraph 122e of the existing framework is helpful in encouraging LPAs to consider these as a means of increasing densification/creation of new homes? If no, how else might we achieve this objective?
37	How do you think national policy on small scale nature interventions could be strengthened? For example, in relation to the use of artificial grass by developers in new development?
38	Do you agree that this is the right approach making sure that the food production value of high value farm land is adequately weighted in the planning process, in addition to current references in the Framework on best most versatile agricultural land?
39	What method or measure could provide a proportionate and effective means of undertaking a carbon impact assessment that would incorporate all measurable carbon demand created from plan-making and planning decisions?
40	Do you have any views on how planning policy could support climate change adaptation further, specifically through the use of nature-based solutions that provide multi-functional benefits?
41	Do you agree with the changes proposed to Paragraph 155 of the existing National Planning Policy Framework?

Question Number	Question Wording
42	Do you agree with the changes proposed to Paragraph 158 of the existing National Planning Policy Framework?
43	Do you agree with the changes proposed to footnote 54 of the existing National Planning Policy Framework? Do you have any views on specific wording for new footnote 62?
44	Do you agree with our proposed Paragraph 161 in the National Planning Policy Framework to give significant weight to proposals which allow the adaptation of existing buildings to improve their energy performance?
45	Do you agree with the proposed timeline for finalising local plans, minerals and waste plans and spatial development strategies being prepared under the current system? If no, what alternative timeline would you propose?
46	Do you agree with the proposed transitional arrangements for plans under the future system? If no, what alternative arrangements would you propose?
47	Do you agree with the proposed timeline for preparing neighbourhood plans under the future system? If no, what alternative timeline would you propose?
48	Do you agree with the proposed transitional arrangements for supplementary planning documents? If no, what alternative arrangements would you propose?
49	Do you agree with the suggested scope and principles for guiding National Development Management Policies?
50	What other principles, if any, do you believe should inform the scope of National Development Management Policies?
51	Do you agree that selective additions should be considered for proposals to complement existing national policies for guiding decisions?
52	Are there other issues which apply across all or most of England that you think should be considered as possible options for National Development Management Policies?
53	What, if any, planning policies do you think could be included in a new framework to help achieve the 12 levelling up missions in the

Question Number	Question Wording
	Levelling Up White Paper?
54	How do you think that the framework could better support development that will drive economic growth and productivity in every part of the country, in support of the Levelling Up agenda?
55	Do you think that the government could go further in national policy, to increase development on brownfield land within city and town centres, with a view to facilitating gentle densification of our urban cores?
56	Do you think that the government should bring forward proposals to update the framework as part of next year's wider review to place more emphasis on making sure that women, girls and other vulnerable groups in society feel safe in our public spaces, including for example policies on lighting/street lighting?
57	Are there any specific approaches or examples of best practice which you think we should consider to improve the way that national planning policy is presented and accessed?
58	We continue to keep the impacts of these proposals under review and would be grateful for your comments on any potential impacts that might arise under the Public Sector Equality Duty as a result of the proposals in this document.

Chapter 15 - About this consultation

This consultation document and consultation process have been planned to adhere to the Consultation Principles issued by the Cabinet Office.

Representative groups are asked to give a summary of the people and organisations they represent, and where relevant who else they have consulted in reaching their conclusions when they respond.

Information provided in response to this consultation, including personal data, may be published or disclosed in accordance with the access to information regimes (these are primarily the Freedom of Information Act 2000 (FOIA), the Data Protection Act 2018 (DPA), the EU General Data Protection Regulation, and the Environmental Information Regulations 2004).

If you want the information that you provide to be treated as confidential, please be aware that, as a public authority, the department is bound by the Freedom of Information Act and may therefore be obliged to disclose all or some of the information you provide. In view of this it would be helpful if you could explain to us

why you regard the information you have provided as confidential. If we receive a request for disclosure of the information we will take full account of your explanation, but we cannot give an assurance that confidentiality can be maintained in all circumstances. An automatic confidentiality disclaimer generated by your IT system will not, of itself, be regarded as binding on the department.

The Department for Levelling Up, Housing and Communities will process your personal data in accordance with the law and in the majority of circumstances this will mean that your personal data will not be disclosed to third parties. A full privacy notice is included below.

Individual responses will not be acknowledged unless specifically requested.

Your opinions are valuable to us. Thank you for taking the time to read this document and respond.

Are you satisfied that this consultation has followed the Consultation Principles? If not or you have any other observations about how we can improve the process please contact us via the [complaints procedure](https://www.gov.uk/government/organisations/department-for-levelling-up-housing-and-communities/about/complaints-procedure) (<https://www.gov.uk/government/organisations/department-for-levelling-up-housing-and-communities/about/complaints-procedure>).

Personal data

The following is to explain your rights and give you the information you are entitled to under the Data Protection Act 2018.

Note that this section only refers to your personal data (your name address and anything that could be used to identify you personally) not the content of your response to the consultation.

1. The identity of the data controller and contact details of our Data Protection Officer

The Department for Levelling Up, Housing and Communities (DLUHC) is the data controller. The Data Protection Officer can be contacted at dataprotection@levellingup.gov.uk or by writing to the following address:

Data Protection Officer
Department for Levelling Up, Housing and Communities
Fry Building
2 Marsham Street
London
SW1P 4DF

2. Why we are collecting your personal data

Your personal data is being collected as an essential part of the consultation process, so that we can contact you regarding your response and for statistical purposes. We may also use it to contact you about related matters.

We will collect your IP address if you complete a consultation online. We may use this to ensure that each person only completes a survey once. We will not use this data for any other purpose.

Sensitive types of personal data

Please do not share [special category \(https://ico.org.uk/for-organisations/guide-to-data-protection/guide-to-the-general-data-protection-regulation-gdpr/lawful-basis-for-processing/special-category-data/#scd1\)](https://ico.org.uk/for-organisations/guide-to-data-protection/guide-to-the-general-data-protection-regulation-gdpr/lawful-basis-for-processing/special-category-data/#scd1) personal data or criminal offence data if we have not asked for this unless absolutely necessary for the purposes of your consultation response. By 'special category personal data', we mean information about a living individual's:

- race
- ethnic origin
- political opinions
- religious or philosophical beliefs
- trade union membership
- genetics
- biometrics
- health (including disability-related information)
- sex life; or
- sexual orientation.

By 'criminal offence data', we mean information relating to a living individual's criminal convictions or offences or related security measures.

3. Our legal basis for processing your personal data

The collection of your personal data is lawful under article 6(1)(e) of the UK General Data Protection Regulation as it is necessary for the performance by DLUHC of a task in the public interest/in the exercise of official authority vested in the data controller. Section 8(d) of the Data Protection Act 2018 states that this will include processing of personal data that is necessary for the exercise of a function of the Crown, a Minister of the Crown or a government department i.e. in this case a consultation.

4. With whom we will be sharing your personal data

DLUHC may appoint a 'data processor', acting on behalf of the Department and under our instruction, to help analyse the responses to this consultation. Where we do

we will ensure that the processing of your personal data remains in strict accordance with the requirements of the data protection legislation.

5. For how long we will keep your personal data, or criteria used to determine the retention period

Your personal data will be held for two years from the closure of the consultation, unless we identify that its continued retention is unnecessary before that point..

6. Your rights, e.g. access, rectification, erasure

The data we are collecting is your personal data, and you have considerable say over what happens to it. You have the right:

- a. to see what data we have about you
- b. to ask us to stop using your data, but keep it on record
- c. to ask to have your data corrected if it is incorrect or incomplete
- d. to object to our use of your personal data in certain circumstances
- e. to lodge a complaint with the independent Information Commissioner (ICO) if you think we are not handling your data fairly or in accordance with the law. You can contact the ICO at <https://ico.org.uk/> (<https://ico.org.uk/>), or telephone 0303 123 1113.

Please contact us at the following address if you wish to exercise the rights listed above, except the right to lodge a complaint with the ICO:

dataprotection@levellingup.gov.uk or

Knowledge and Information Access Team
Department for Levelling Up, Housing and Communities
Fry Building
2 Marsham Street
London
SW1P 4DF

7. Your personal data will not be sent overseas

8. Your personal data will not be used for any automated decision making

9. Your personal data will be stored in a secure government IT system

We use a third-party system, Citizen Space, to collect consultation responses. In the first instance your personal data will be stored on their secure UK-based server. Your personal data will remain on the Citizen Space server and/or be transferred to our secure government IT system for 2 years of retention before it is deleted.

1. A material consideration is generally considered as a matter that should be taken into account in deciding a planning application or on an appeal against a planning decision.
2. [Analysis \(https://publications.parliament.uk/pa/bills/cbill/58-03/0169/LevellingUpandRegenerationBillImpactAssessment.pdf\)](https://publications.parliament.uk/pa/bills/cbill/58-03/0169/LevellingUpandRegenerationBillImpactAssessment.pdf) (PDF, 2.05MB) suggests that on average, authorities without an up-to-date Local Plan would have 14% higher housing supply if their housing supply (as a proportion of existing housing stock) were as much as those with an up-to-date plan.
3. Unless these strategic policies have been reviewed and found not to require updating.
4. By pre submission consultation stage, we mean Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012 for local plans and section 335(2) of the Greater London Authority Act 1999 for Spatial Development Strategies.
5. Town and Country Planning (Local Planning) (England) Regulations 2012.
6. Social Rent is a type of affordable housing for rent, as defined in the NPPF's glossary.
7. A mansard typically sits behind and parapet and is characterised by two slopes, the lower steep and the upper shallow.
8. "Published" for a spatial development strategy.
